FAO – SEPAL

System for Earth Observation Data Access, Processing and Analysis for Land Monitoring

Erik Lindquist Daniel Wiell Mino Togna Yelena Finegold Andreas Vollrath Roberto Fontanarosa Esther Phillips

www.fao.org/forestry

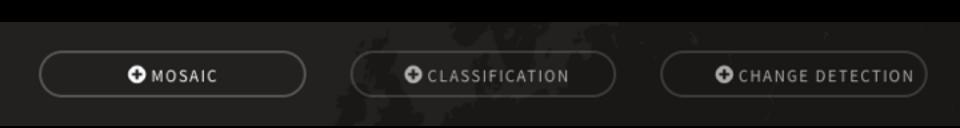

SEPAL v 2.1

- New look for mosaic including classification and change detection
- Improved RADAR processing
- Integration of Planet and DigitalGlobe
- Time-series analysis

Mosaic / Composite

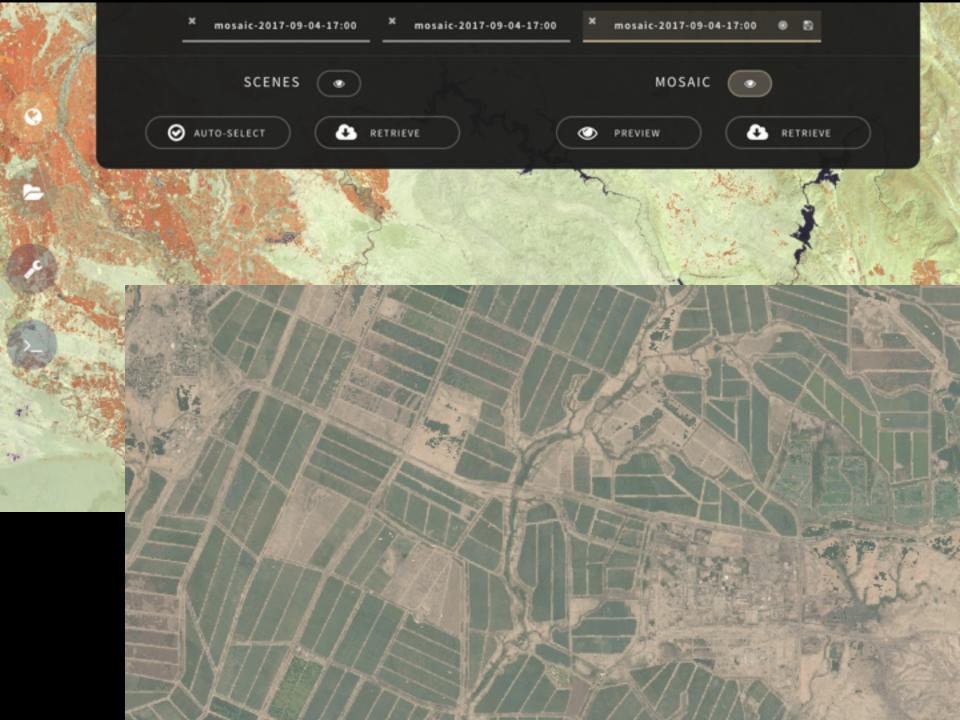

- Simplified user-interface
- Workflow integrated
- Improved 'best-pixel' selection
- Save 'recipes' for future use / recall

Mosaic / Composite

Mosaic / Composite

RADAR Processing

- Automated generation of Sentinel-1 timeseries/timescan data
- Geometrically terrain corrected product (GTC) or radiometrically terrain-corrected product (RTC) generation
- Time-series gif and kmz files for quality assessment during processing
- Increase in speed of a factor of 3
- Progress monitor for processing
- Kyoto & Carbon FNF global data download
- Docker file allows use of OST on Windows/Mac
- Demos included for capacity building

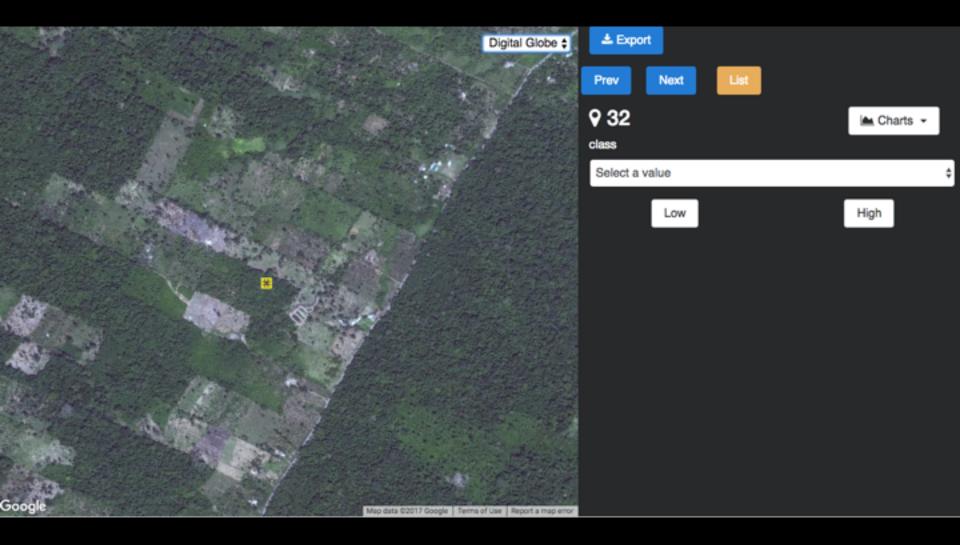

Integration of Planet and DigitalGlobe

- SEPAL CEO
- Planet quarterly composites
- DigitalGlobe 'best' basemap
- Improved reference data collection
- Improved area estimation

Planet integration for Reference Data

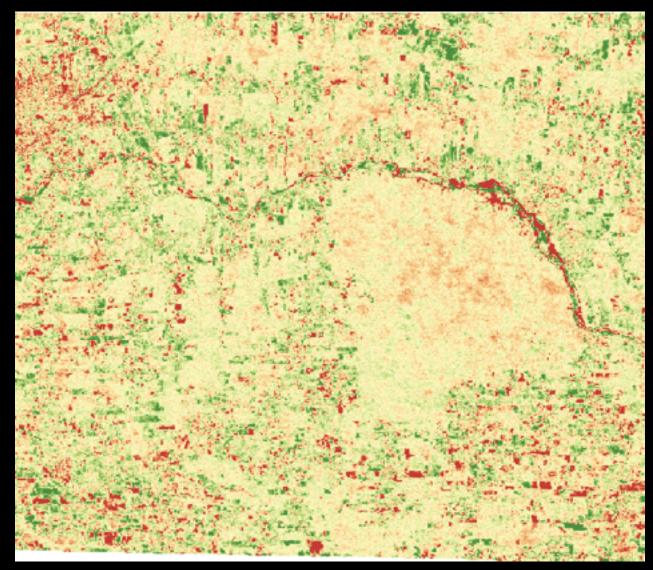

DG integration for Reference Data

Time-series Analysis

- Close to implementing TS module
- BFAST and BfastSpatial
- Increased speed and larger areas analyzed

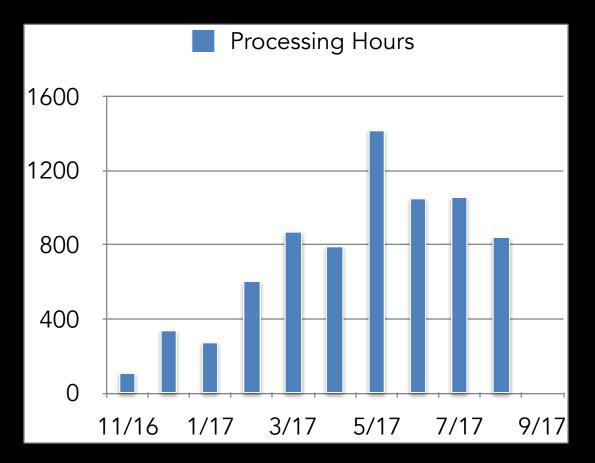

Time-series Analysis

SEPAL User Statistics

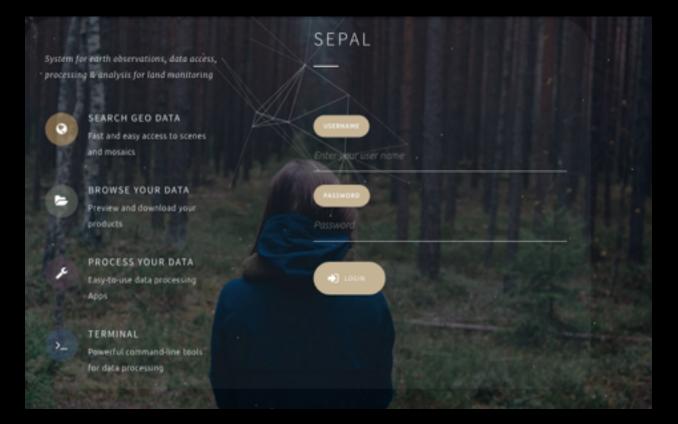

- Increased user numbers
- Increased data processing
- Increased data storage
- 442 Active Users
- 2 TB of data in 'active' storage

SEPAL User Statistics

Next Steps

- Collaboration with Forestry TEP
- Integration of datacube
- Streamlined user experience

SEPAL - 2.0
