

INPE's EO contributions to CEOS (and GEO)

Summary

Introduction

Forest monitoring operational initiatives

Data policy and software availability

CBERS for Africa initiative

Perspectives for 2010 – 2020

A perspective for EO

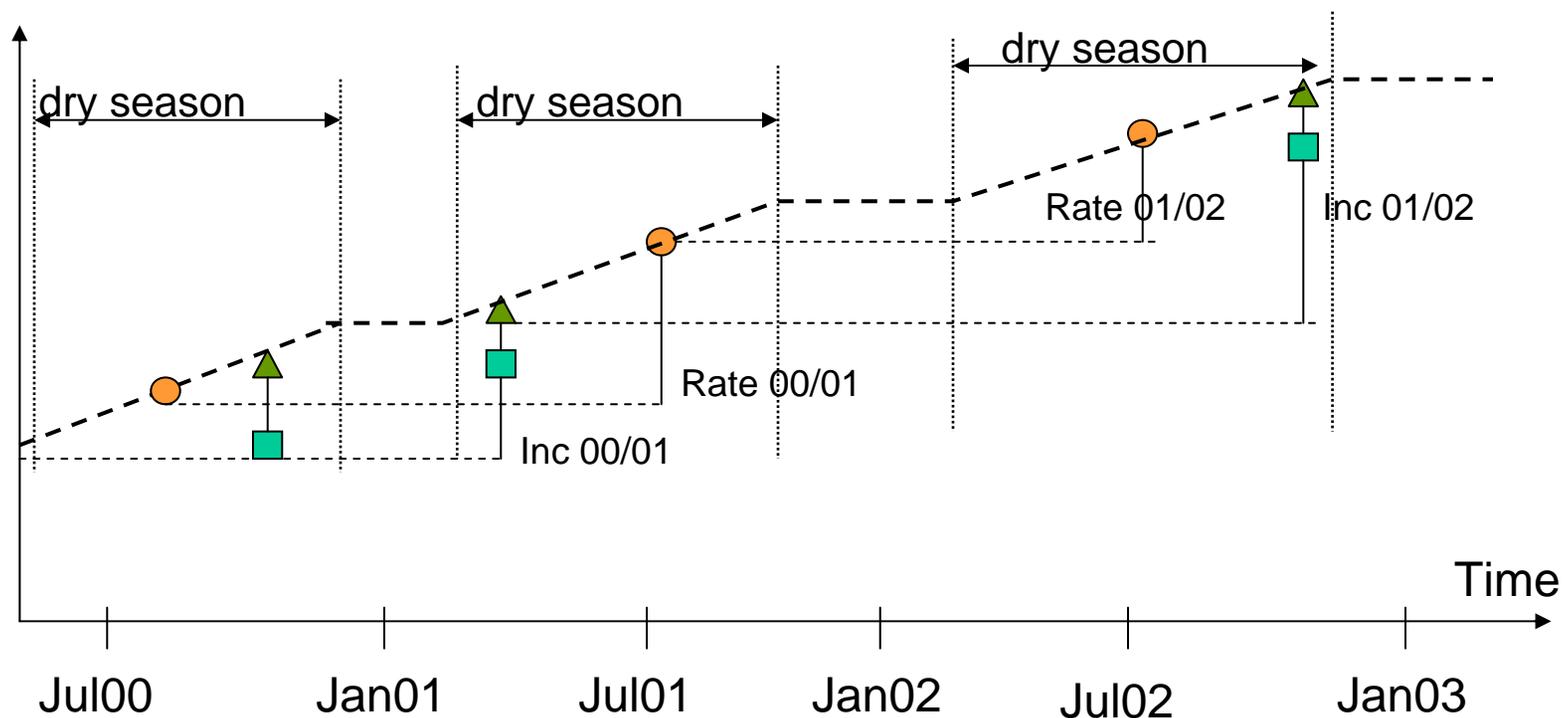

A constellation of satellites providing free global land imaging for all countries on Earth

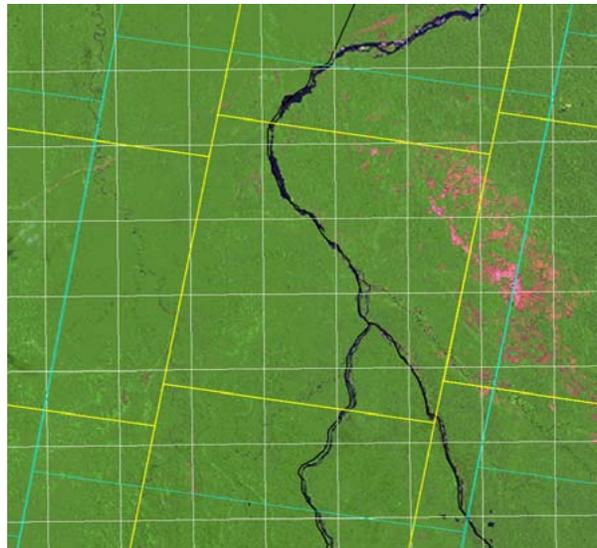

Effective contributions to CEOS LSI and GEO data democracy and data sharing principles

Deforestation in the Amazon

PRODES project – deforestation rates

PRODES multi-data approach

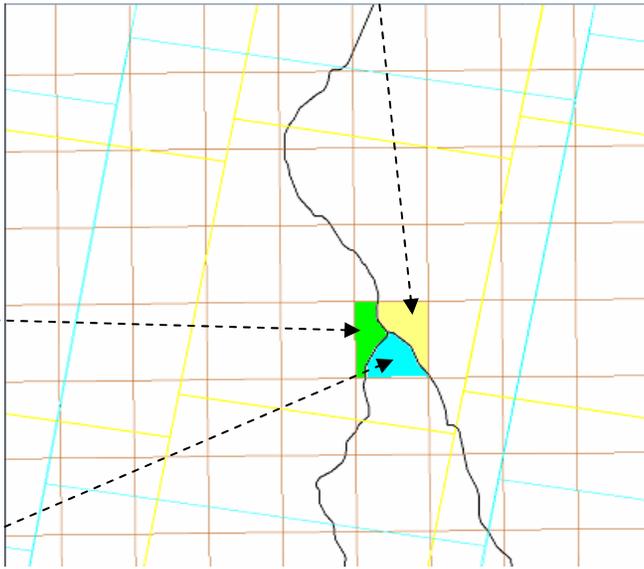

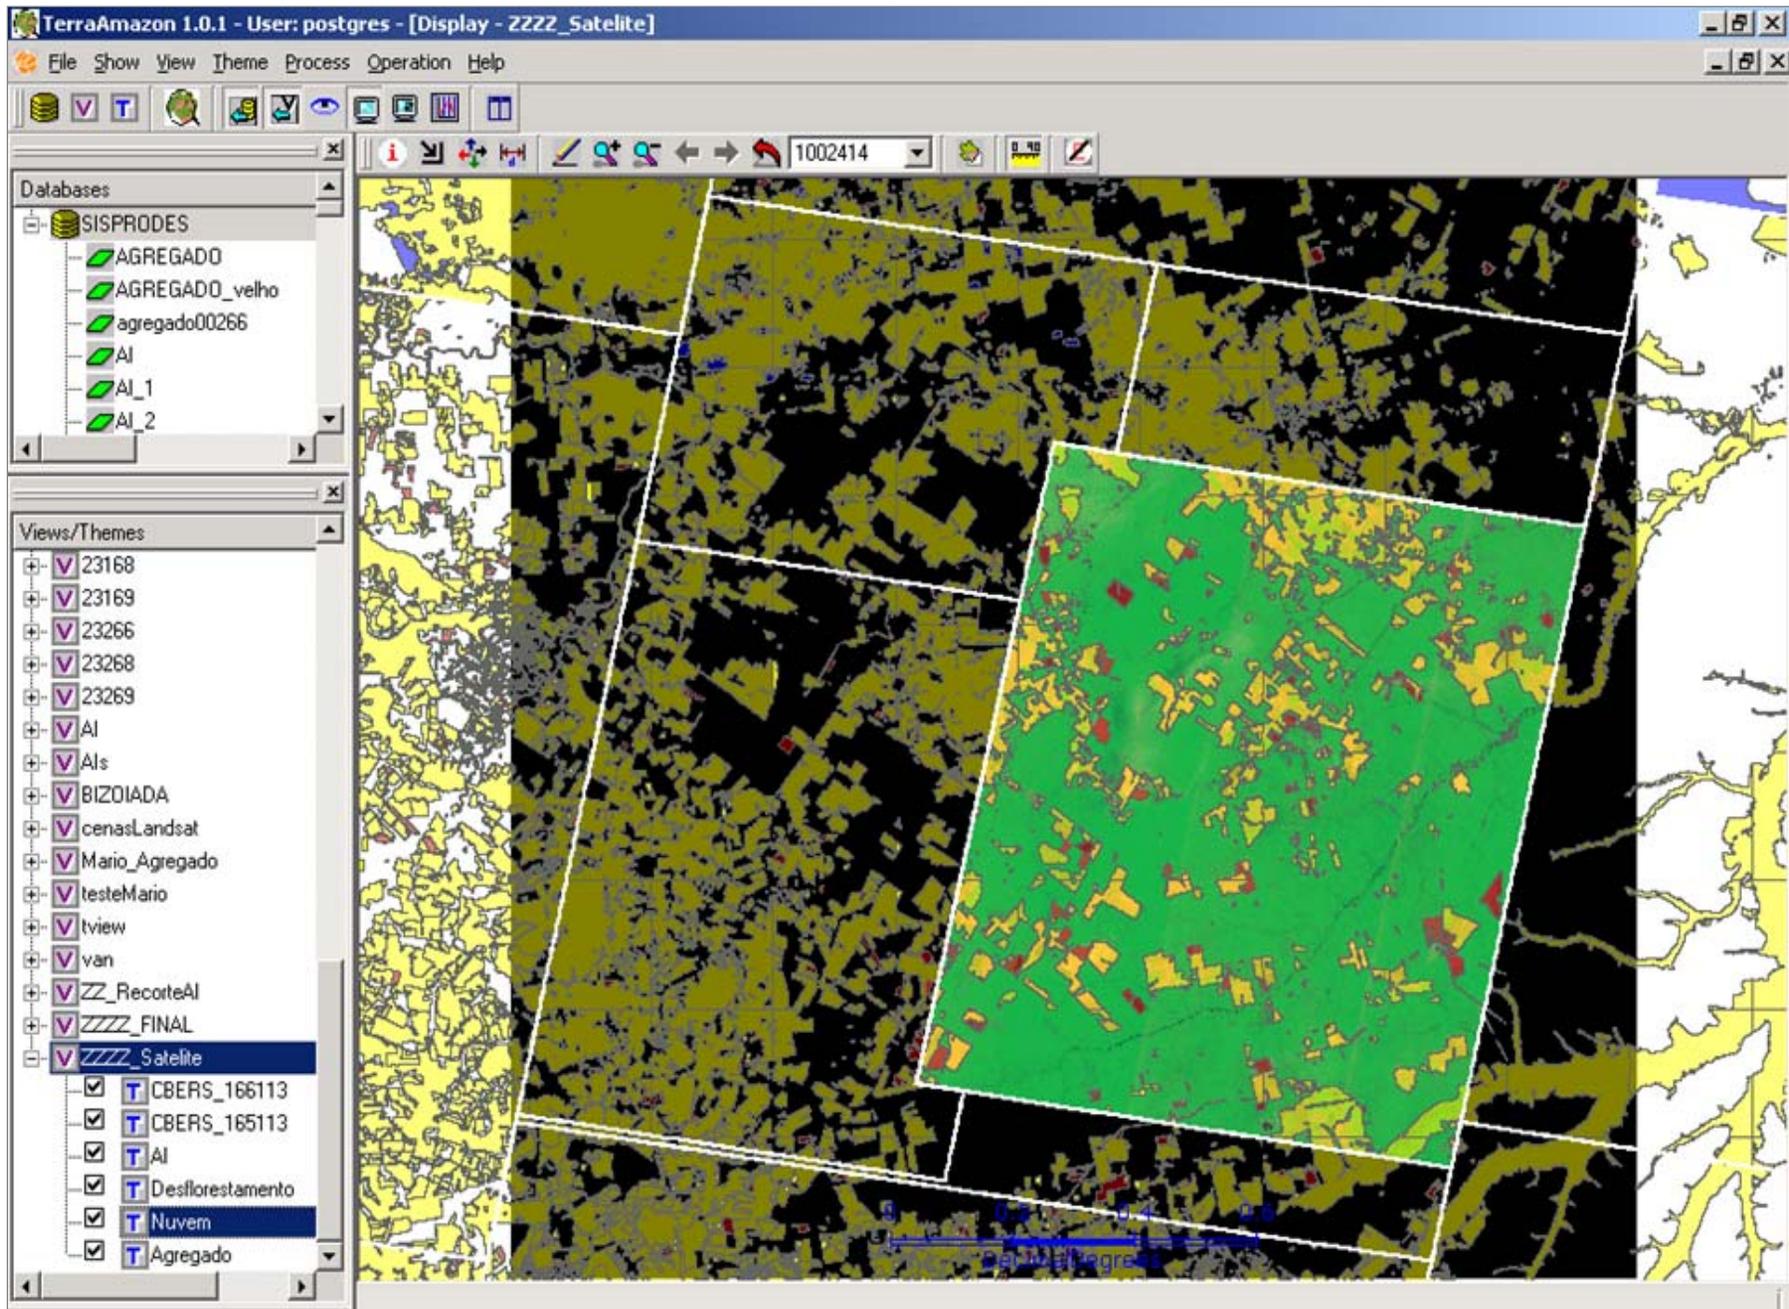

LANDSAT

CCD/CBERS

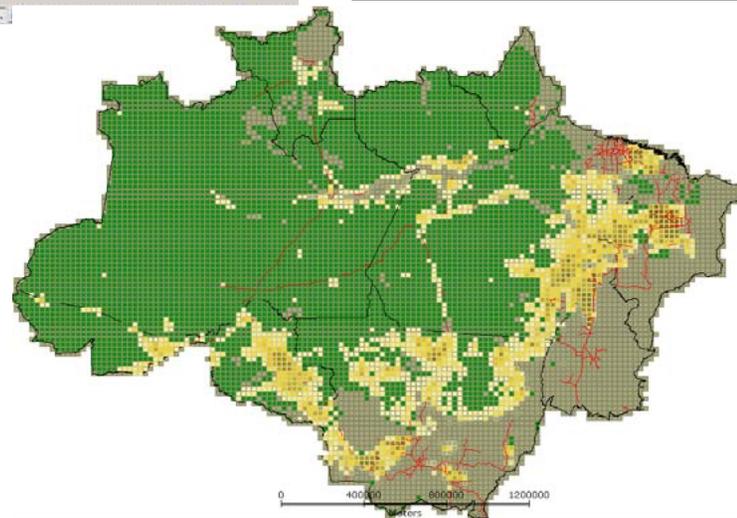

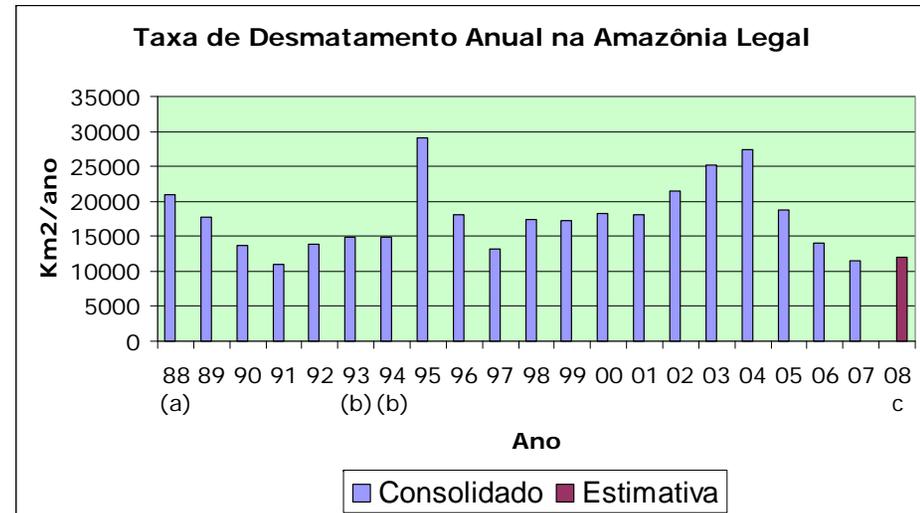

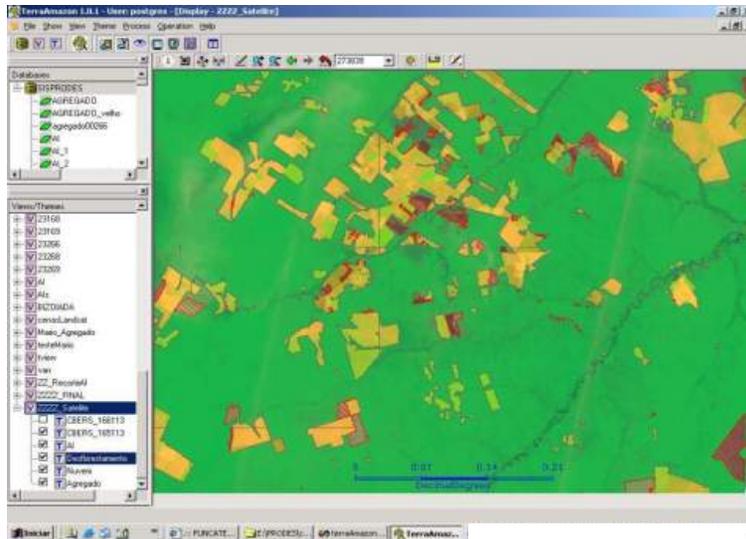

DMC

25km

PRODES wall to wall assessment

Main uses of PRODES results

Effectiveness of deforestation control policies

Increasing demands of concerned society for governmental actions

Support for policy making at regional and local scales

Public awareness of deforestation in the Amazon (www.obt.inpe.br/prodes)

But PRODES is not enough ...

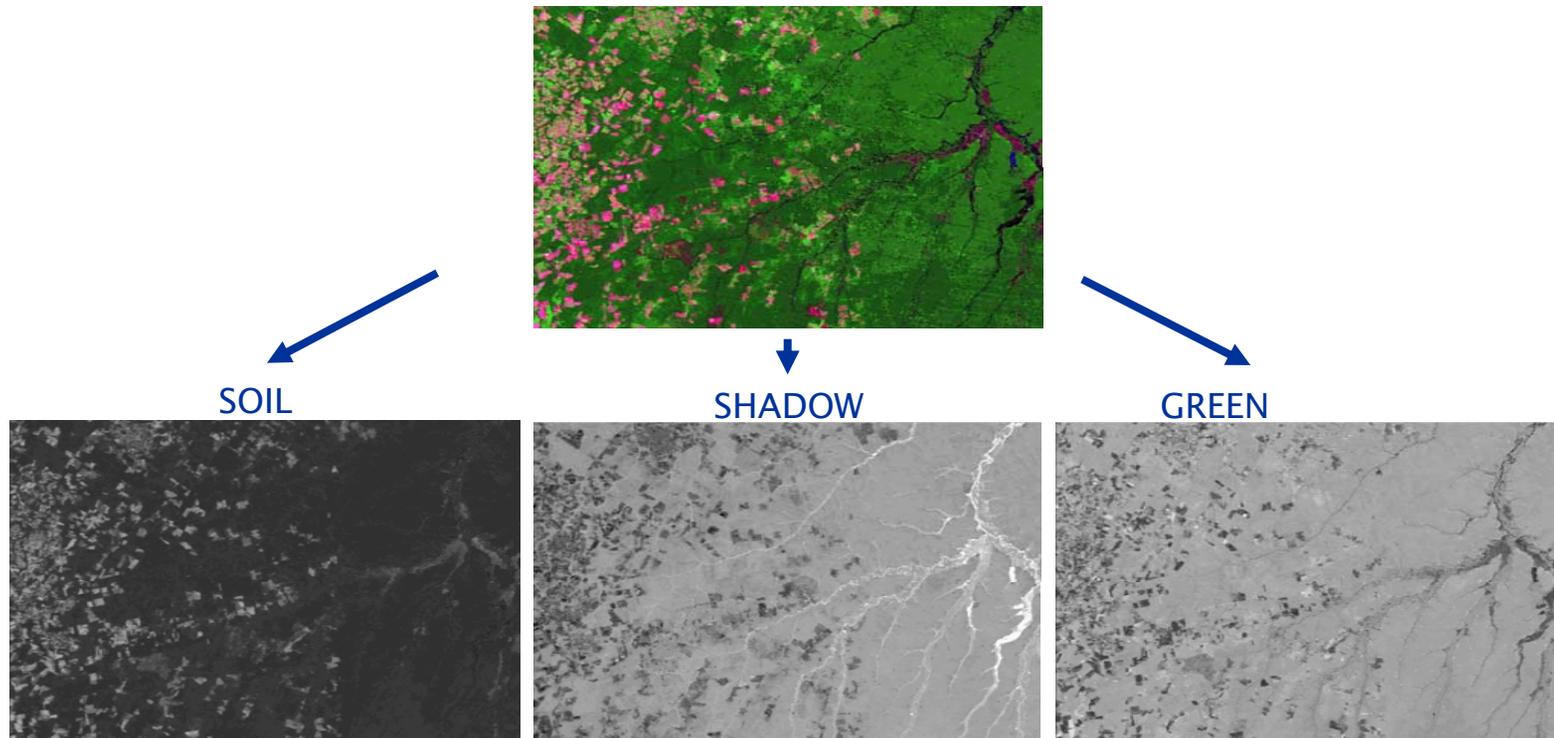

Results are obtained and published after the damage is done

It is difficult for the government to punish illegal deforestation after it is installed

There are demands for data availability and faster information production

DETER project – near real time

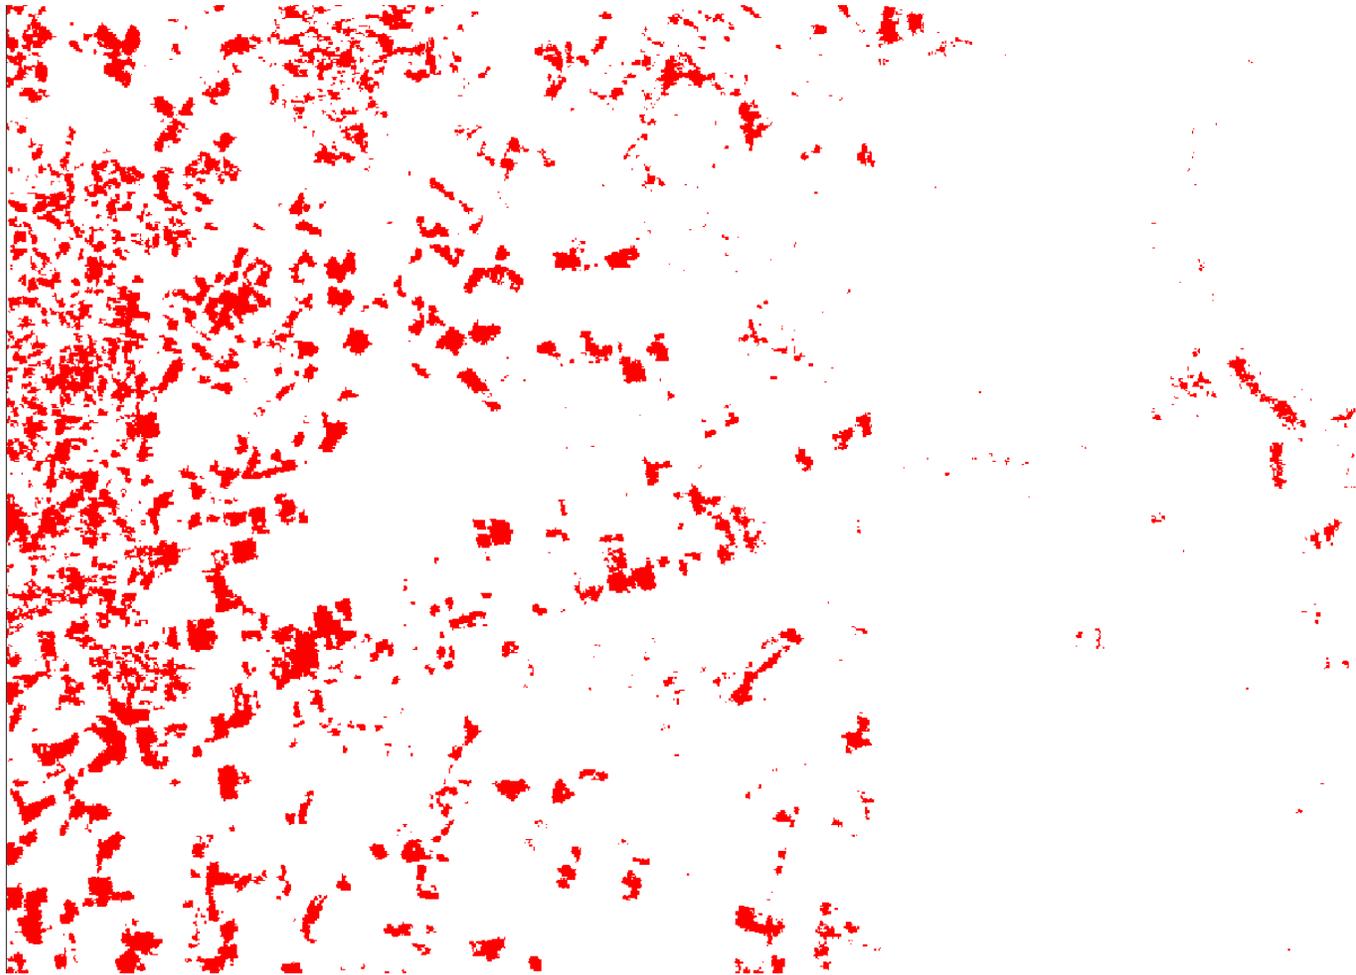

Same approach as PRODES with MODIS 250m

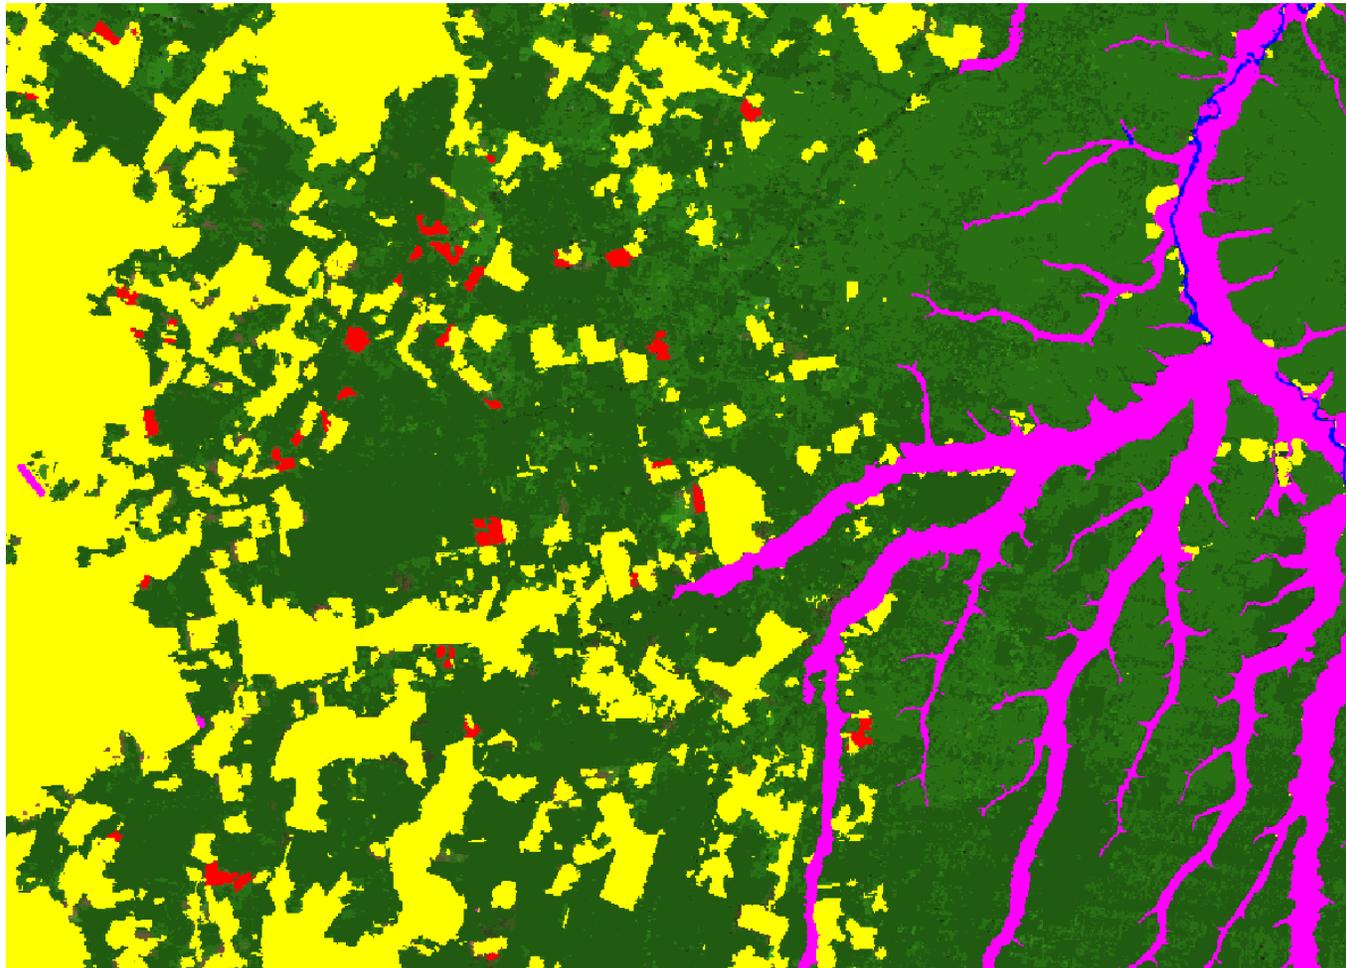

Soil image (April 22 to May 7, 2004)

Classification of soil image

2003 extension + changes + image

Detecção do desmatamento em Tempo Real - DETER

Desmatamentos detectados nos Municípios ou Unidades de

Impacts of DETER

Faster information for strategic decisions by the deforestation control agencies

Better efficiency in law enforcement

Immediate public awareness by monthly information dissemination
(www.obt.inpe.br/deter)

If it has been published in English ...

Improved Monitoring of Rainforests Helps Pierce Haze of Deforestation

Deforestation produces a significant amount of greenhouse gas emissions through burning, clearing, and decay. But exactly how much?

Twenty-five years ago, the best way for Brazilian scientists to gauge the rate of deforestation in the Amazon was to superimpose dots on satellite photos of the world's largest rainforest that helped them measure the size of the affected area. INPE, the government agency responsible for remote deforestation monitoring, didn't release regional maps and refused to explain its analytical methods. The result was data that few experts found credible.

Today, Brazil's monitoring system is the envy of the world. INPE has its own remote-sensing satellite, a joint effort with China launched in 1999, that allows it to publish yearly totals of deforested land that scientists regard as reliable. Using data from NASA's 7-year-old Terra satellite, INPE also provides automated weekly clear-cutting alerts that other tropical nations would love to emulate.

SCIENCE VOL 316 27 APRIL 2007

...nated the need for measurement dots. "They've really turned things around," says forestry scientist David Skole of Michigan State University in East Lansing.

Generating good data on deforestation is more than an academic exercise. The process of cutting down forests and clearing the land—by burning the wood, churning soil for agriculture or grazing, and allowing the remaining biomass to decay—produces as much as 25% of the world's yearly emissions of greenhouse gases. That makes keeping tabs on deforestation a crucial issue for government officials negotiating future climate agreements—including a meeting next month in Bonn, Germany, and one next year in Bali to extend the 1997 Kyoto agreement after its 2012 expiration.

CBERS program timeline

CBERS-1

September 1999 – March 2003

CBERS-2

October 2003 – March 2009

CBERS-2B

Launched in September, 2007

CBERS-3

Scheduled for June, 2011

CBERS-4

Scheduled for September, 2014

CBERS (free) data policy

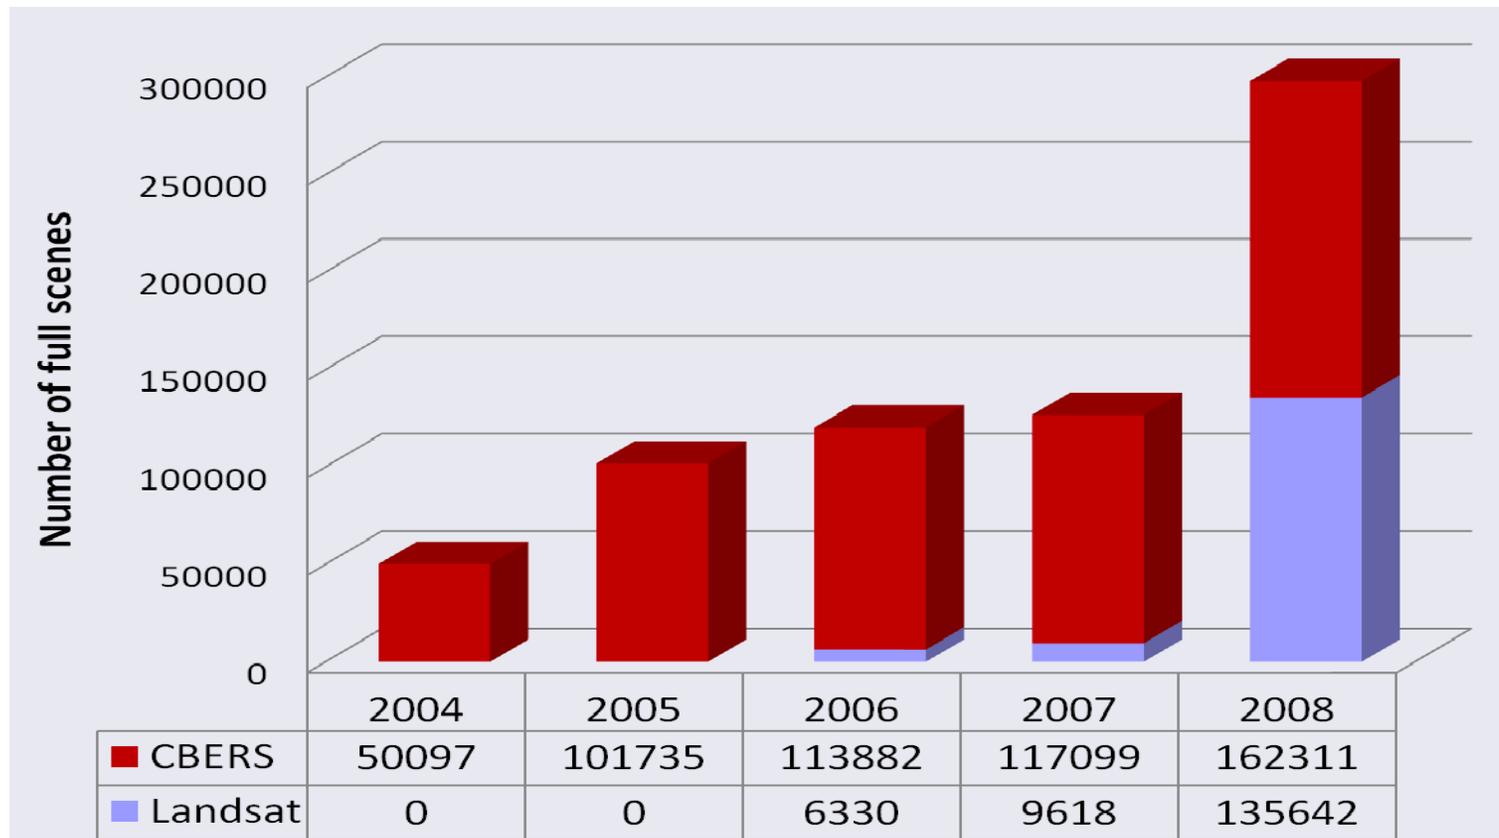

Data acquired over Brazil are available free of charges to anyone

Data acquired over China are available free of charges to the Chinese people

Brazil and China agree to apply the same data policy for Africa

Brazil applies the same policy for any country

CBERS and Landsat data distribution

CBERS program contributions

CEOS LSI constellation

GEO data democracy & data sharing tasks

CalVal activities

CBERS direct downlink at USGS – EROS in 2006 and 2008 for cross-calibration with Landsat data

CBERS onboard data recorder used over Antarctica for the Dome-C experiment (QA4EO – WGCaVal)

Free and open-source software

SPRING (www.dpi.inpe.br/spring)

General purpose GIS & image processing system

Freeware since 1996

in 2010

More than 100,000 users

Windows and Linux versions

Available in English, Spanish, French, and Portuguese

Free and open-source software

TerraLib (www.dpi.inpe.br/terralib)

Open source GIS classes and functions library

Written in C++ and 'almost' OGC compliant

GNU LGPL (Lesser General Public License)

TerraView (www.dpi.inpe.br/terraview)

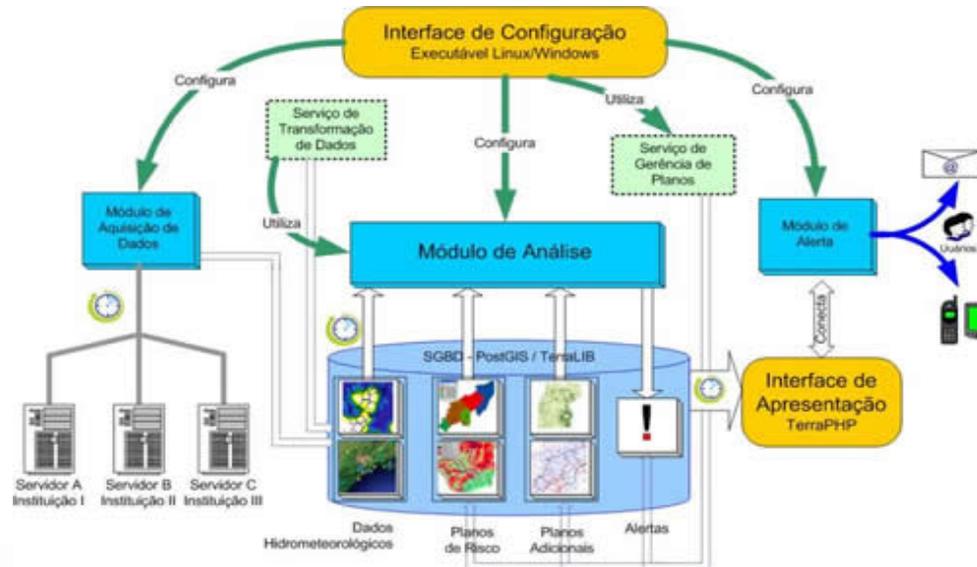

Open source GIS application built on TerraLib

GNU GPL (General Public License)

Free and open-source software

Sismaden (www.dpi.inpe.br/sismaden)

SOA (Service Oriented Architecture) prototype for monitoring (risk alerts) natural disasters

Free and open-source software

Marlin (www.dgi.inpe.br/CDSR)

Open source application for satellite imagery visualization

GNU GPL built on TerraLib

Windows and Linux versions

Support for GeoTIFF image file format

Tools for geometric and radiometric analyses

CBERS for Africa initiative

Dissemination of free CBERS data for African countries

Partnership with existing ground stations

Adherence to the CBERS data policy

GEO capacity building task

Training programs – Ghana (TerraView)

Free and open source software

CBERS for Africa initiative

Agreements with three ground stations

CSIR, Hartebeeshoek, in South Africa

INTA, Maspalomas, in the Canary Islands, Spain

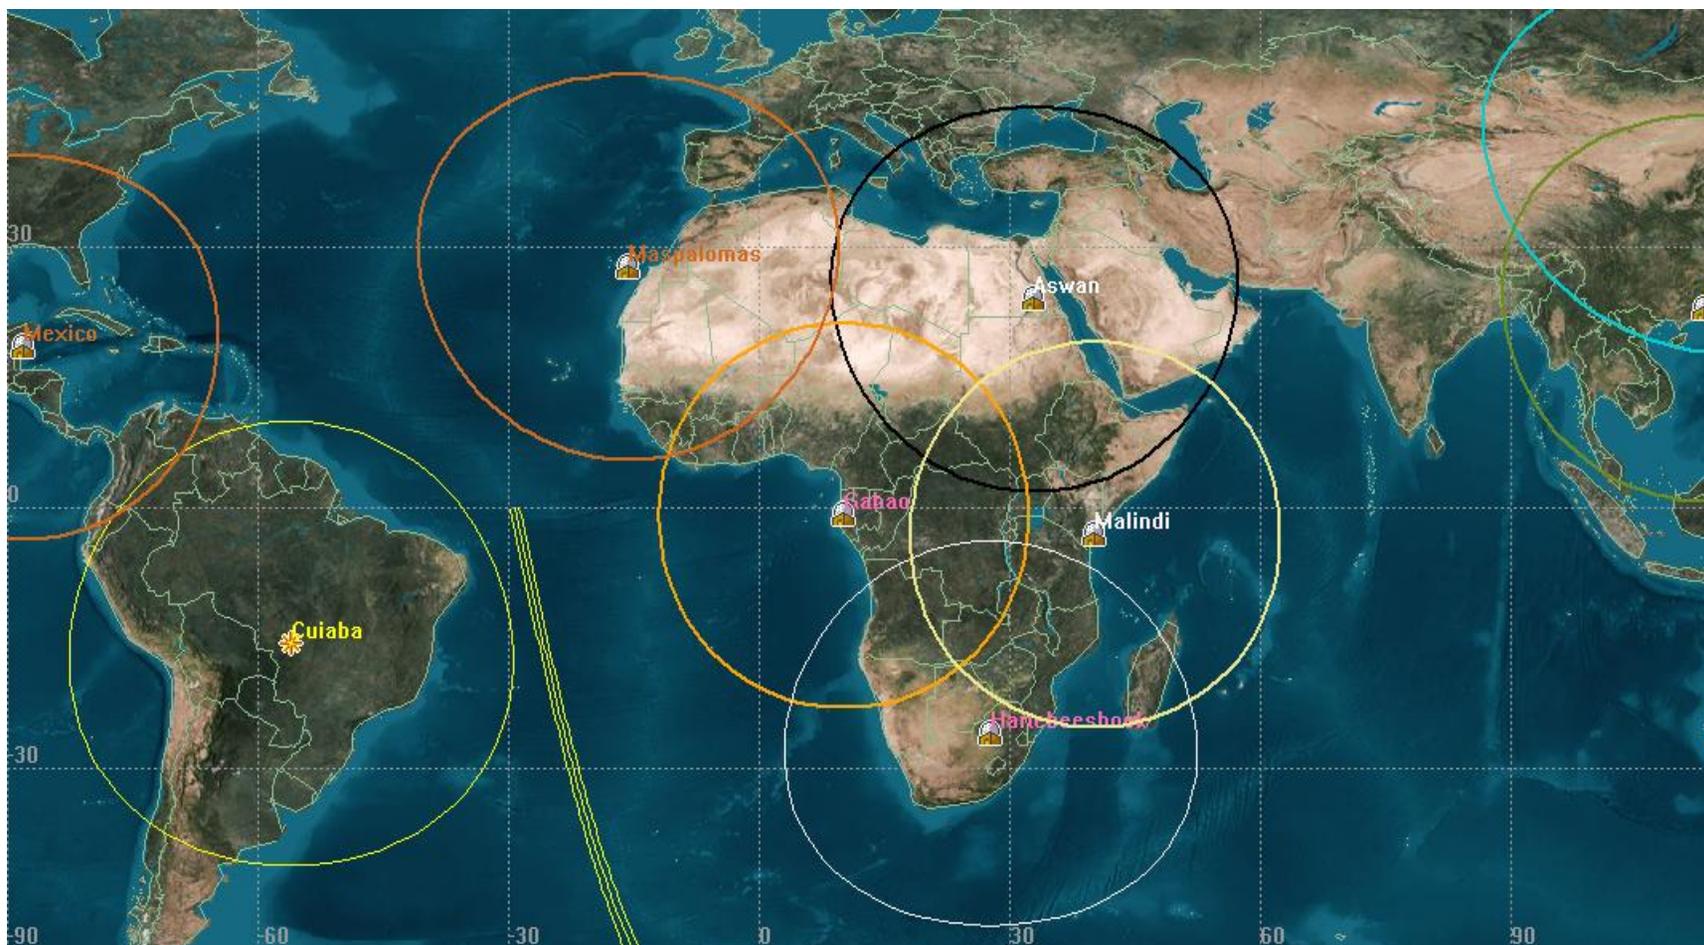

NARSS, Aswan, in Egypt

Negotiations with ASI for Malindi, in Kenya

Gabon has recently demonstrated interest in establishing a CBERS ground station

Cooperation with IRD, AFD, CNES

CBERS for Africa initiative

Perspectives for 2010

Application of PRODES and DETER elsewhere

Indonesia, countries in the Equatorial Africa

Training at INPE's regional center in the Amazon

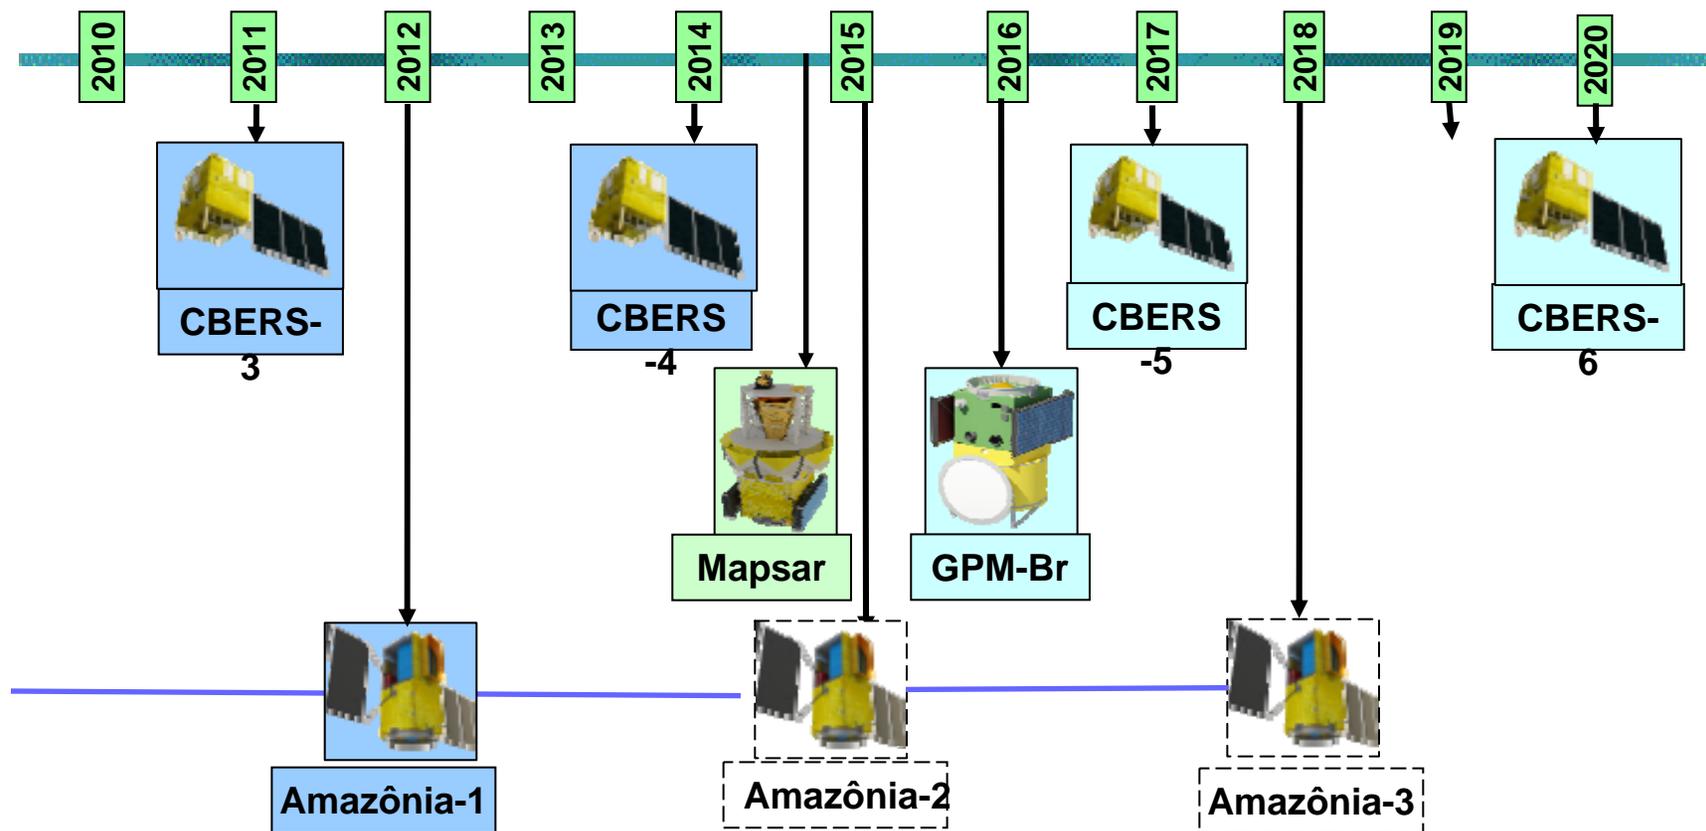

GIS and Remote Sensing capacity building in Africa (GEO CB task)

Mozambique, South Africa

Extensive use of free and open source software

Regular production of GIS-ready CBERS data

INPE's EO satellite program

INPE's EO contributions to CEOS (and GEO)
