CEOS Role in GEO FCT Task

from CEOS slide for GEO-VI

Background

- ➤ The GEO Forest Carbon Tracking initiative seeks to develop a global framework for a system of national systems for forest carbon tracking in support of the inclusion of forests in a post-Kyoto climate agreement.
- Satellite and in-situ data are an essential element of the Monitoring, Reporting and Verification (MRV) systems that will be employed in the regulatory framework for such an agreement.

CEOS role

- CEOS is demonstrating the technical capacity and institutional frameworks to support continuity of the required satellite observations in support of post-Kyoto regulatory frameworks.
- 7 National Demonstrator countries have been the subject of a coordinated satellite data acquisition effort by CEOS agencies in 2009 with complete coverage achieved for both radar and optical data

Questions on CEOS role

1. What dose CEOS aim?

- > to demonstrate the technical capacity. (how?)
- > to provide dataset consolidating different satellite data.
- > to coordinate continuous observation plan for 7 NDs.

2. What is the user?

- ➤ MRV systems employed regulatory framework. (Who is/will be developing?)
- Carbon CoP.
- General stakeholders.

3. What is the end state?

- > Operational MRV system.
- > FCT portal. (Who dose it develop?)
- Written agreements.
- Report.
