The Montreal Statement

(November, 2013)

We, the assembled participants of the 27th Plenary meeting of the Committee on Earth Observation Satellites (CEOS), taking place in Montreal, Canada, on 5 and 6 November 2013:

Building upon our collective commitments to coordinate our Earth observation satellite missions in response to needs expressed by the United Nations Framework Convention on Climate Change (UNFCCC), the UN Office for Disaster Risk Reduction International Strategy for Disaster Reduction (UNISDR), UN Conventions on Biodiversity and Desertification, the intergovernmental Group on Earth Observations (GEO), the Global Climate Observing System (GCOS), World Meteorological Organization (WMO) Programmes, the Group of 20 Industrialised Nations (G20), the Food and Agriculture Organization (FAO), and other external stakeholders;

Confirming our Primary Mission to ensure international coordination of civil space-based Earth observations programs and promote exchange of data to optimize societal benefit and inform decision making for securing a prosperous and sustainable future for humankind; and,

Recognizing the major investments made by CEOS Agencies in developing the space-based segment of the Global Earth Observation System of Systems, and global observing systems operated under the auspices of the United Nations;

Declare that: With the renewal and strengthening of the organization governance, CEOS Agencies have agreed to continue and enhance their cooperation to respond effectively to Earth Observation users’ needs. We will do so by achieving integration across the full range of Earth observations, by closing important observational gaps, and by promoting the sharing, and improving access to and use of, CEOS Agency data. This cooperation will be expressed through global-level initiatives and projects, including:

• In a joint effort with the Coordination Group for Meteorological Satellites (CGMS), development and provision of climate data records, in support of climate monitoring, research, and services;
• Coordinated space-based observations to support the effective monitoring and management of the worlds’ forested regions to support any future international climate agreement, including Reducing Emissions from Deforestation and forest Degradation, sustainable forest management, conservation and carbon enhancement (REDD+);
• Implementation of the 1st phase of the acquisition strategy for supporting the monitoring of agricultural production at national, regional and global levels which is complementary to the Agricultural Market Information System (AMIS) initiative;
• Implementation of a strategy for observing and assessing the global carbon cycle;
• Application of space-based Earth observations to support research in biodiversity, the world’s oceans, and an improved understanding of the global water cycle; and
• Strengthened support to the disaster management community through both the creation of a new CEOS Working Group on Disasters and the development of a global observation strategy.

CEOS will accomplish these activities through contributions from its Virtual Constellations and Working Groups, among other mechanisms. CEOS will continue to address user needs, for data quality, data discovery and access, and capacity building.

CEOS plays a vital role in ensuring coordination of Earth observations to enable decisions for securing a prosperous and sustainable future for humankind.
