

# LAND PRODUCT

## SUBGROUP REPORT

**Jeff Morisette**

Jeffrey.T.Morisette@nasa.gov, (301) 614-6676

WGCV 21 Beijing China 15-17 October 2003

# LPV outline

- **review of subgroup's status and goals**
- **current activities**
  - Land Product Accuracy statement (needs updating!)
  - CEOS Core Sites (with WGISS)
  - Listservs
  - Special Issue proposal (looking for input)
- **Upcoming activities**
  - Upcoming workshops
  - Biome map
  - Opportunities
- **Conclusions**

# LPV outline

  - Listservs
  - Special Issue proposal (looking for input)
- **Upcoming activities**
  - Upcoming workshops
  - Biome map
  - Opportunities
- **Conclusions**

Working Group on  
Calibration & Validation

# Land Product Validation Subgroup

- Established in 2000
- Followed Terrain-mapping subgroup as topic-specific subgroup (non-wavelength-specific)
- Jeff Morisette (NASA) starting as chair in February 2003
- Agreement from Fred Baret ("VALERI, INRA-CSE) to be "chair-elect" = potential chair in 2006)
- Web site linked off of WGCV home page (and plan to adopt WGCV web design)

# CEOS Definition

## **Validation:**

*the process of assessing by independent means the quality of the data products derived from the system outputs*

(LPV will operate under this definition, but also with the understanding that validation activities should consider user accuracy needs and feedback to algorithm improvements.)

# Why validate global land products

- WGCV definition implies validation = “Estimating Uncertainty”
- **Good science** and resource management require understanding of product accuracy/uncertainty
- Explicit statements of uncertainty fosters an **informed user** community and improved use of data
- International environmental protocols and agreements imply **products may be** independently evaluated and possibly **challenged**
- As more, and similar, global products are produced by CEOS members, **inter-use** will require characterization of each product’s uncertainty

# Mission Statement & Goals

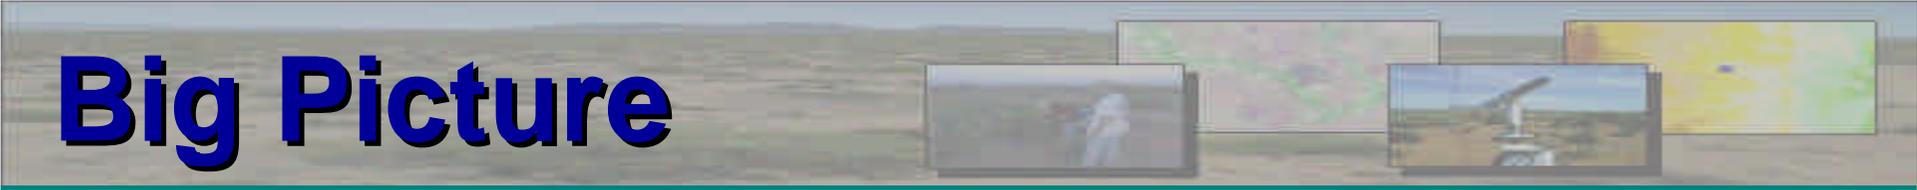

- to foster quantitative validation of higher level global land products derived from remote sensing data and relay results so they are relevant to users
- to increase the quality and economy of global satellite product validation *via* developing and promoting international standards and protocols for field sampling, scaling, error budgeting, data exchange for global land product validation
- to advocate mission-long validation and intercomparison programs for current and future earth observing satellites.

# Objectives

- Work with users to define uncertainty objectives
- To identify and support global test sites for both systematic and episodic measurements (WGCV/WGISS test facility)
- Identify opportunities for coordination and collaboration
  - Through product Inter-comparisons
  - Through global test sites for systematic measurements
- Develop consensus “best practice” protocols for data collection and description
  - Workshops
  - Case studies
  - Publications (*with CEOS WGCV “endorsement”?*)
- Develop procedures for validation, data exchange and management (with WGISS)
- To serve as a clearinghouse for accuracy statements on CEOS member global land products

# Big Picture

LPV provides a validation service to the Integrated Global Observation Strategy's Global Terrestrial Observation System.

## Implications:

- Focus Products: Biophysical, Land Cover, & Fire
- Working in conjunction with GOFC/GOLD's regional networks
- Need to integrate with TEMS & GT-Net

# LPV outline

- **review of subgroup's status and goals**
- **current activities**
  - Land Product Accuracy statement (needs updating!)
  - **CEOS Core Sites (with WGISS)**
  - Listservs
  - Special Issue proposal (looking for input)
- **Upcoming activities**
  - Upcoming workshops
  - Biome map
  - Opportunities
- **Conclusions**

Click here then select MODIS

## ...several of the MODIS parameters

Parameter	Resolution	Accuracy	Obs Cycle	Delay
Fire area	1 km	5 % (Max)	1 d	Missing
Fire temperature	1 km	Missing	1 d	Missing
FPAR	1 km	25 % (Max)	10 d	Missing
Land cover	1 m	Missing	0.085 y	Missing
Land surface imagery	Missing	Missing	Missing	Missing
Land surface temperature	1 km	1 K	24 h	24 h
Leaf Area Index (LAI)	1 km	25 % (Max)	10 d	2 d
NDVI	1 km	10 % (Max)	10 d	24 d
Sea-ice cover	1 km	Missing	24 d	24 d
Snow cover	1 km	10 % (Max)	168 h	576 h
Vegetation type	1 km	Missing	96 d	2 d

- Apparently based on algorithm theoretical base documents
  - not actual data
- And there did not appear to be linked support information

# MODIS validation “hierarchy”

- **Stage 1 Validation:** Product accuracy has been estimated using a small number of independent measurements obtained from selected locations and time periods and ground-truth/field program effort.
- **Stage 2 Validation:** Product accuracy has been assessed over a widely distributed set of locations and time periods via several ground-truth and validation efforts.
- **Stage 3 Validation:** Product accuracy has been assessed and the uncertainties in the product well established via independent measurements in a systematic and statistically robust way representing global conditions.

# Accuracy statements

- **Should be “user-oriented” and supported with peer-review literature**
- **Augment validation “stage hierarchy”**
- **Standardize/summarize information for each product**
- **MODIS land team plans to update CEOS information for MODIS land products**

# Example: MODIS accuracy statements

MODLAND  
Validation home page

...page for each product

# LPV outline

- **review of subgroup's status and goals**
- **current activities**
  - **Land Product Accuracy statement (needs updating!)**
  - **CEOS Core Sites (with WGISS)**
  - **Listservs**
  - **Special Issue proposal (looking for input)**
- **Upcoming activities**
  - **Upcoming workshops**
  - **Biome map**
  - **Opportunities**
- **Conclusions**

# CEOS Core Sites

“CEOS Core Sites”: WGISS Test Facility

Joint project between CEOS Working Group on Cal/Val and Working Group on Information Systems and Services

- currently staging MODIS and SPOT VEG for 5 sites
- proposal for MERIS accepted, data forthcoming
- possibly MISR, GLI, SRTM, Chinese satellites
- plan to incorporate WTF with EOS Core Site page and ORNL’s Mercury

***More on this later...***

# LPV outline

- review of subgroup's status and goals
- current activities
  - Land Product Accuracy statement (needs updating!)
  - CEOS Core Sites (with WGISS)
  - Listservs
  - Special Issue proposal (looking for input)
- Upcoming activities
  - Upcoming workshops
  - Biome map
  - Opportunities
- Conclusions

# Five listservs established

`ceos_lpv_gen@listserv.gsfc.nasa.gov`

**General information regarding LPV activity, both scientific and administrative**

`ceos_lpv_rad@listserv.gsfc.nasa.gov`

**surface RADiation products, including surface reflectance/atmospheric correction, land surface temperature, albedo and BRDF**

`ceos_lpv_bio@listserv.gsfc.nasa.gov`

**BIOphysical parameters, including vegetation indices, leaf area index, FPAR, and vegetation productivity**

`ceos_lpv_lc@listserv.gsfc.nasa.gov`

**Land Cover and land cover change products**

`ceos_lpv_fire@listserv.gsfc.nasa.gov`

**FIRE, burn scar, and fire emissions products**

*(related to action WGCV 20-11)*

# LPV outline

- review of subgroup's status and goals
- current activities

  - CEOS Core Sites (with WGISS)
  - Listservs
  - Special Issue proposal (looking for input)
- Upcoming activities
  - Upcoming workshops
  - Biome map
  - Opportunities
- Conclusions

# Proposed TGARS special issues

## Purpose:

- Lay out the current suite of higher-level global land products and quantitatively establish their accuracy.
- Provide a user's perspective on the implications of a product's accuracy to understand:
  - how accurate the product needs to be
  - why it is important to quantify the uncertainty
  - how close currently available data come to meeting those needs

# Proposed TGARS special issues

- Jeff Morisette and Fred Baret co-editors
- Describing the state of the art research on both protocol and results for validation and accuracy assessment of global land products.
- Three sections:
  - Surface Radiation variables
  - Ecosystem variables
  - Land cover characteristics (including land cover change, fire, and burnt area)
- Solicit a summary from User/GCM community to write a note for each section on the implication for the uncertainty/validation of the products

# Special issues: potential invitees\*

## ***Radiation Budget Variables:***

- Surface Reflectance
  - MODIS (Vermote and Morisette)
  - VEGETATION and POLDER (CNES, O. Hagolle)
  - MERIS (P. Goryl)
  - GLI (Terry Nakajima, Alfredo Huete)
- Land Surface Temperature (LST)/Emissivity,
  - MODIS (Zhangming Wan, Simon Hook, Fred Prata)
- Snow and Ice Cover,
  - MODIS (Dorothy Hall)
  - MSG (Carlos da Camara)
- Albedo/Bi-directional Reflection Distribution function (BRDF)
  - MODIS (Jeff Privette, Crystal Schaaf, Shunlin Liang)
  - Meteosat (Yves Govaerts)
  - POLDER (J.L. Roujean, R. Lacaze, B. Geiger, O. Samain)
- Global Climate Modeling perspective on the accuracy of radiation budget variables (Robert Dickinson)

*\* Draft list – this list does not imply commitment on behalf of the authors or the editors*

# Special issues: potential invitees\*

## ***Ecosystem Variables:***

- Vegetation Indices
  - MODIS/AVHRR/GLI (Alfredo Huete)
  - AVHRR-historical (Jorge Pinzon)
- Leaf Area Index (LAI)/Fractional Photosynthetically Active Radiation (FPAR),  
MODIS and the CEOS LAI-Intercomparison (Ranga Myneni, Jeff Privette, Jeff Morisette,  
Fred Baret, Richard Fernandes, Jing Chen)
  - MERIS (Bernard Pinty)
  - VALERI program (Fred Baret, also include continuous fields validation)
  - BigFoot program (Warren Cohen, also include Land Cover & NPP validation)
- Vegetation Production: Daily Photosynthesis (PSN)/Annual Net Primary Production (NPP)
  - MODIS and Fluxnet (Steve Running, Dennis Baldocchi)
  - VEGETATION (Frank Veroustraete)
  - GLOBCARBON (Stephen Plummer)
- Global Climate Modeling perspective on the accuracy of Ecosystem variables  
(Gordon Bonan)
- Global Terrestrial Observing System perspective on the accuracy of Ecosystem variables  
(Josef Cihlar)

*\* Draft list – this list does not imply commitment on behalf of the authors or the editors*

# Special issues: potential invitees\*

## ***Land Cover Characteristics:***

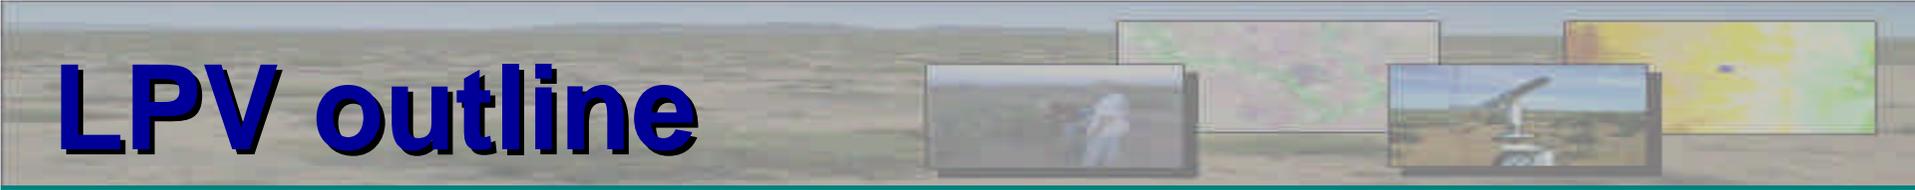

- Fire and Thermal Anomalies and Burned Area
  - JRC's fire and Burn scar products (Jean-Marie Grégoire)
  - ESA's fire and burn scare products (Olivier Arino)
  - MODIS fire and burnt area (Justice, Roy, Csiszar)
- Land Cover
  - IBGP, GLC2000, and MODIS: Strahler/Woodcock/Mayaux
  - Vegetative Cover Conversion and Vegetative Continuous fields:  
MODIS (Ruth DeFries, Matthew Hansen)
- Global Climate Modeling perspective on the accuracy of Land cover characteristic variables (Gordon Bonan)

*\* Draft list – this list does not imply commitment on behalf of the authors or the editors*

# Proposed TGARS special issues

- Suggestions for other invitees are welcome
- Suggestions or volunteers for reviews are welcome
- Proposal will be submitted to IEEE TGARS in 2003
- Anticipated publication date in 2005
- Ultimate objective is to provide not “mandatory protocols” but an “acceptable standard”

# LPV outline

- **review of subgroup's status and goals**
- **current activities**
  - **Land Product Accuracy statement (needs updating!)**
  - **CEOS Core Sites (with WGISS)**
  - **Listservs**
  - **Special Issue proposal (looking for input)**
- **Upcoming activities**
  - **Upcoming workshops**
  - **Biome map**
  - **Opportunities**
- **Conclusions**

# LPV Upcoming Topical workshops

- “Results” workshop for LAI-intercomparison  
*fruition of LAI-intercomparison*  
Spring 2004, University of Montana, Missoula, USA
- Follow-up Land Cover/Change  
*aiming toward “best practices” document*  
Early 2004, Boston University, USA
- Fire and Burn scar:  
Global Geostationary Fire Monitoring Applications  
A Joint GOFC/GOLD Fire and CEOS LVP Workshop  
March 23-25, 2004, EUMETSAT, Darmstadt, Germany  
*(related to Action WGCV 20-8)*
- Surface Reflectance and Albedo/BRDF  
? in conjunction with IVOS intercomparison meeting  
? and/or in conjunction with next BSRN

# LPV Inter-comparison

Site contacts provide “Vital Statistics”

LPV provides subsets of global LAI product(s)

LPV to create link to the site from the LAI-intercomparison page

Field campaign(s):

LPV acquires and posts relevant high-res multispectral imagery

Site contacts collect field data and register these in the Mercury system

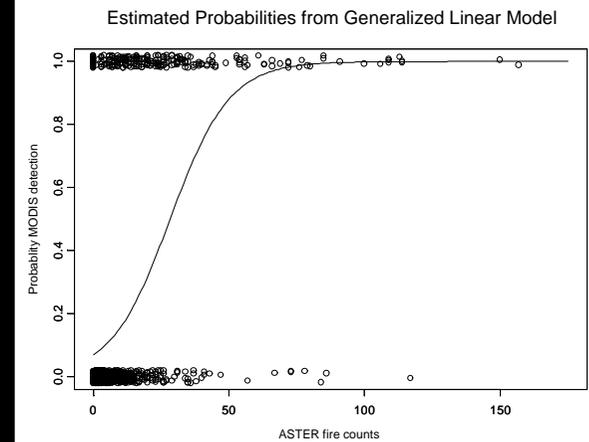

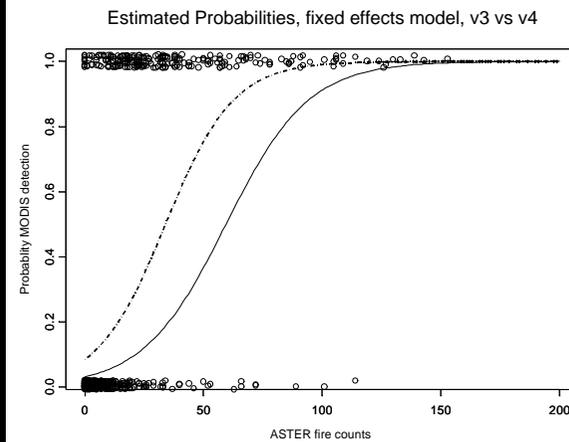

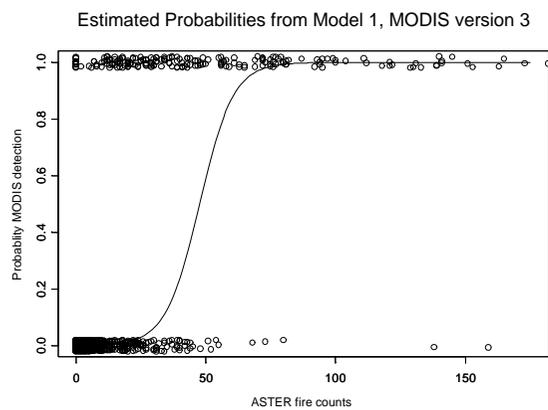

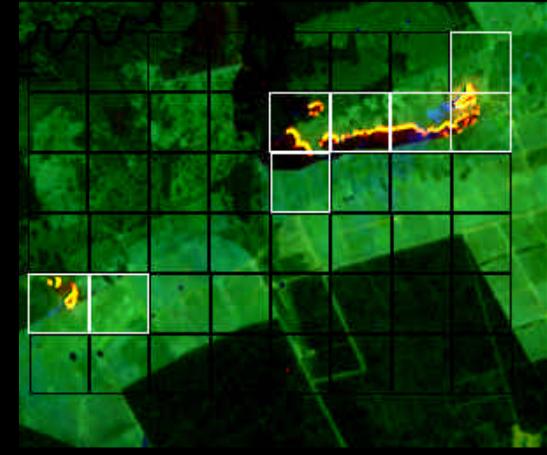

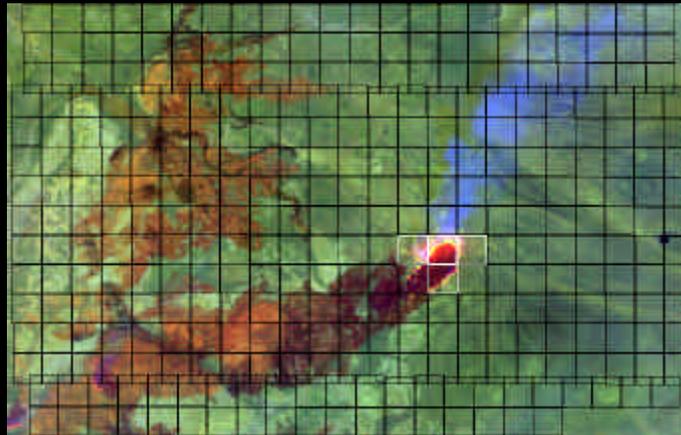

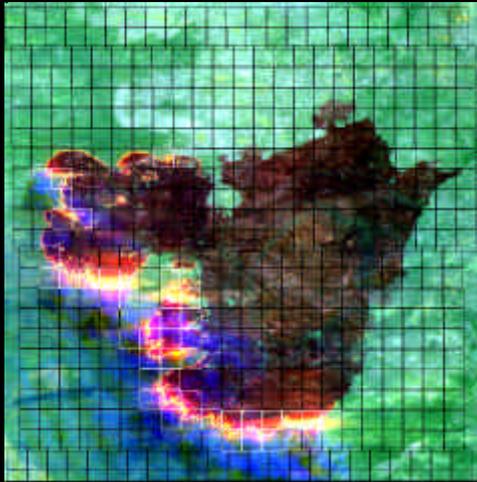

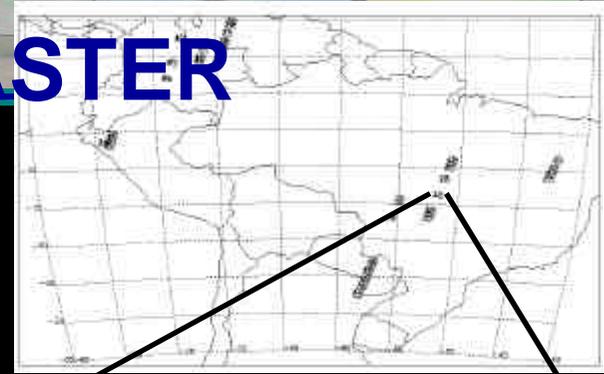

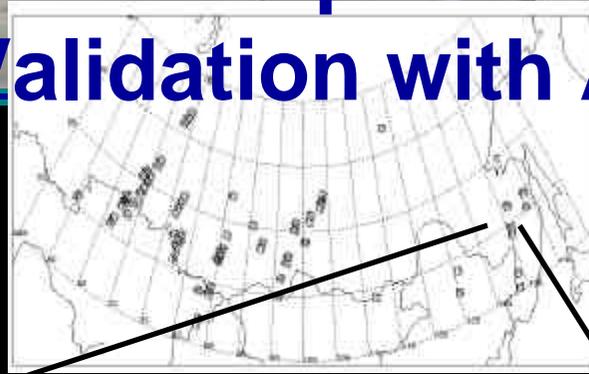

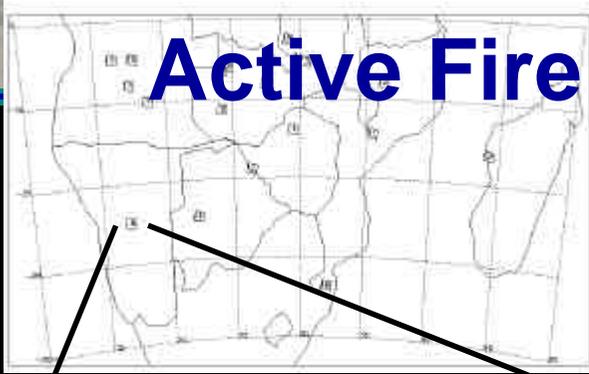

Site contacts provide Internet link to locally maintained high-resolution LAI surface, with proper documentation on how the surface was derived

LPV posts link to LAI-surface on LAI-intercomparison page

Data are shared among fellow “LAI-intercomparison” participants for research comparing both validation results and methods

Sites added to this international activity are those that help create a globally representative sample - across biomes and continents  
AND  
have a strong need or intention to utilize global, coarse resolution, LAI products.

# GOFC/GOLD Fire implementation team: Active Fire Validation with ASTER

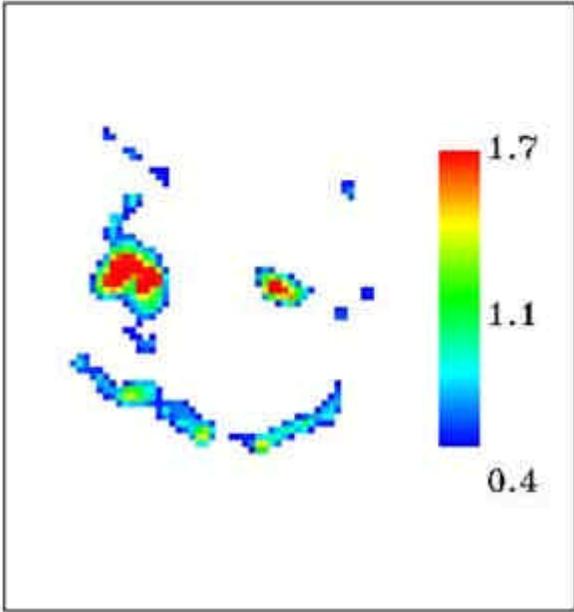

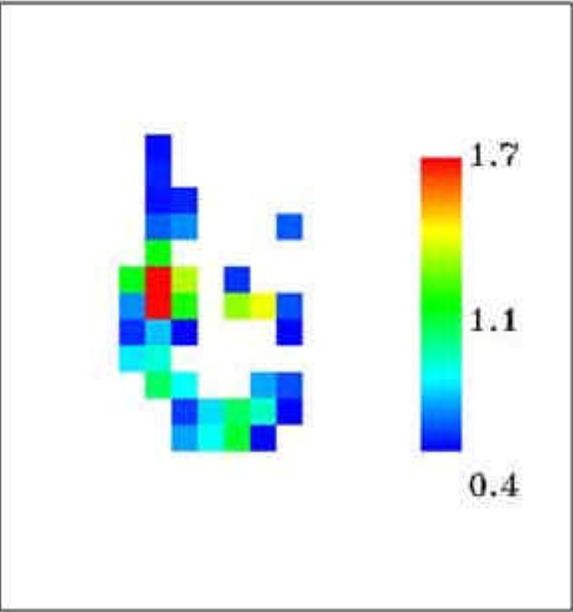

# GOFC-Fire: MODIS vs BIRD

MODIS Fire - Validation

Address: <http://modis-fire.gsfc.nasa.gov/validation.asp>

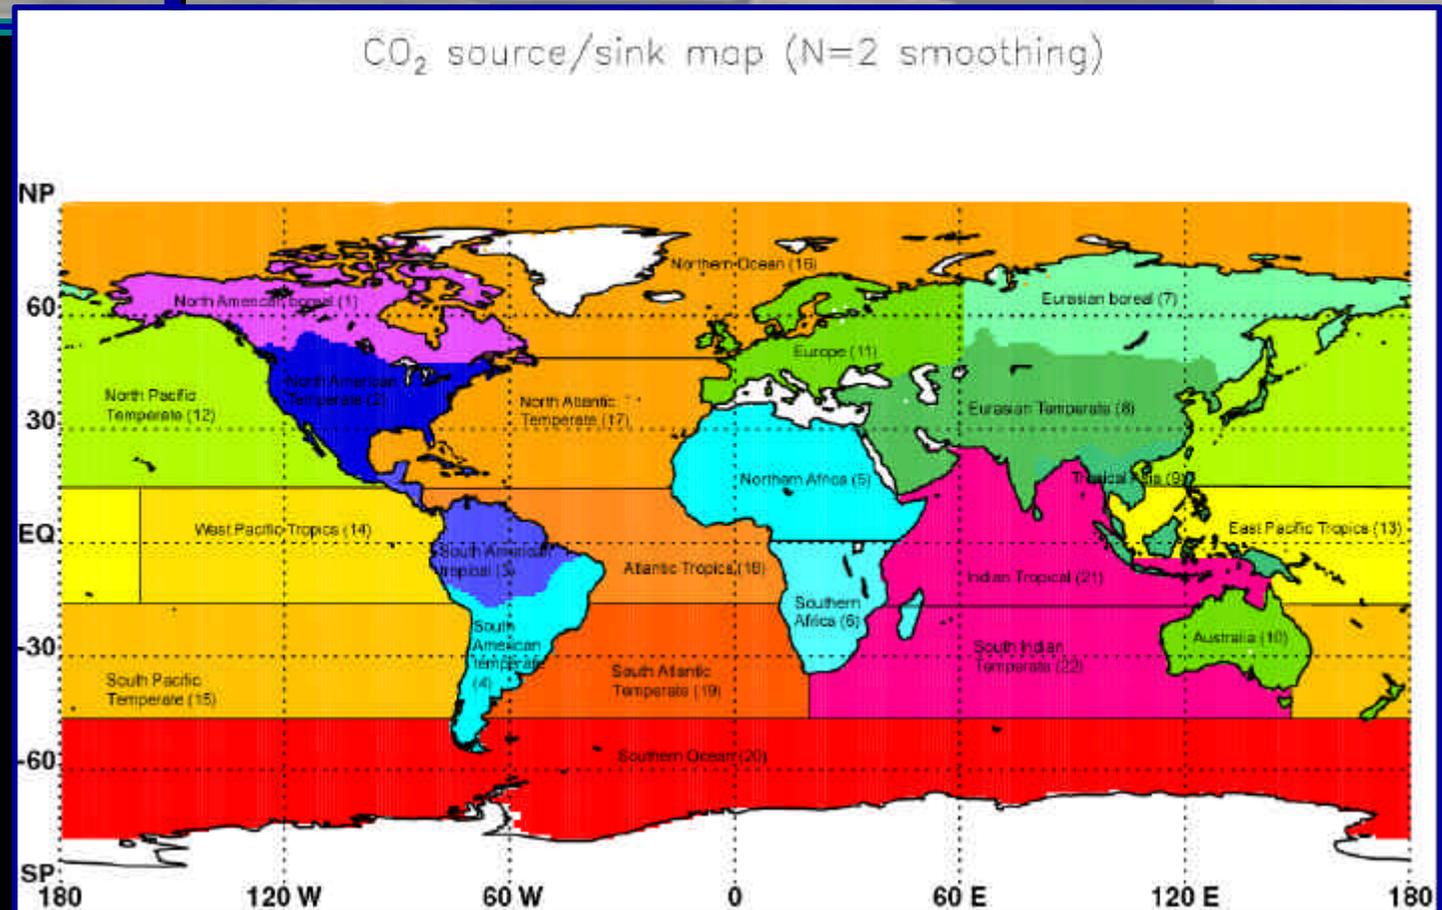

### Validation by Near-Coincident Data from the Experimental Fire Satellite "BIRD"

Comparison with near-coincident observations by the [BIRD](#) (Bi-Spectral Infrared Detection) satellite is under way in collaboration between DLR, Germany, and the University of Maryland. BIRD is a dedicated experimental platform for hot spot detection with high saturation temperatures to allow the measurement of energy release.

BIRD HRSR MIR (3.4-4.2 $\mu\text{m}$ )	MODIS band 21 (3.929-3.989 $\mu\text{m}$ )
	

Internet zone

# Biome Map

- Exhaustive and mutually exclusive global biome map
- Serendipitously matches several GOFC/GOLD regional networks
- Published - independently of LPV

Gurney et al. (2002) Towards robust regional estimates of CO<sub>2</sub> sources and sinks using atmospheric transport models. *Nature*, 415, 626-630, 7 Feb. 2002.

# LPV opportunities

Need to determine the proper relationship and role for LPV/CEOS Land Validation Core Sites and the two, related GTOS activities:

- GT-Net
- TEMS

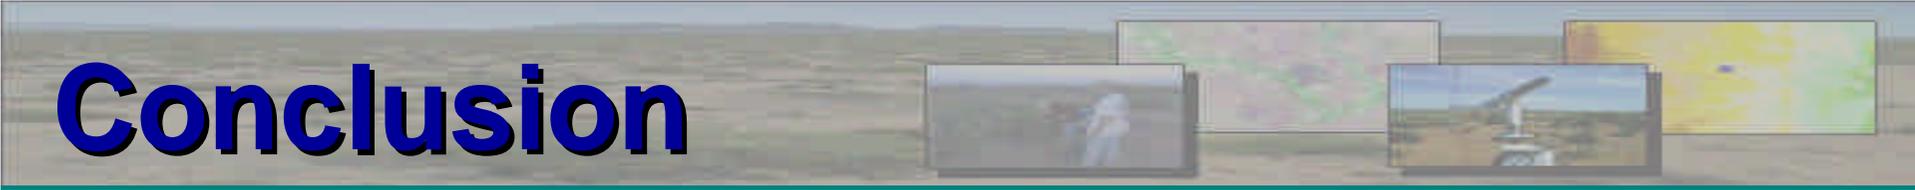

Pending Proposal will help support LPV activities:

Response to NASA Research Announcement (NRA-03-OES-02) to support LPV infrastructure  
(selections anticipated by late 2003)

# LPV outline

- review of subgroup's status and goals
- current activities
  - Land Product Accuracy statement (needs updating!)
  - CEOS Core Sites (with WGISS)
  - Listservs
  - Special Issue proposal (looking for input)
- Upcoming activities
  - Upcoming workshops
  - Biome map
  - Opportunities
- **Conclusions**

# Conclusion

- LPV needs to establish interaction with CEOS/WMO database
- WGISS Test Facility is getting significant attention & there is now the need to define stage 2 and beyond
- Special issue is a major undertaking but will realize some initial goals
- LAI-Intercomparison results will help assess the utility of this type of activity
