Key Figures

- **24 000 Employees** ✓ Space: 14 000
✓ average age: 34
- **15 subsidiaries in 7 cities**
- **4.55 Billion USD revenue in 2014**

**Key Player in Global
Space Industry**

CAST industrial footprint

15 subsidiaries in 7 cities
3 Representative Offices Abroad

Space Segments

➤ We design, build and deliver end-to-end space systems:

◆ 168 spacecrafts delivered

◆ 88 spacecrafts in orbit

Providing worldwide customers with full range of space to ground solutions

Telecommunications

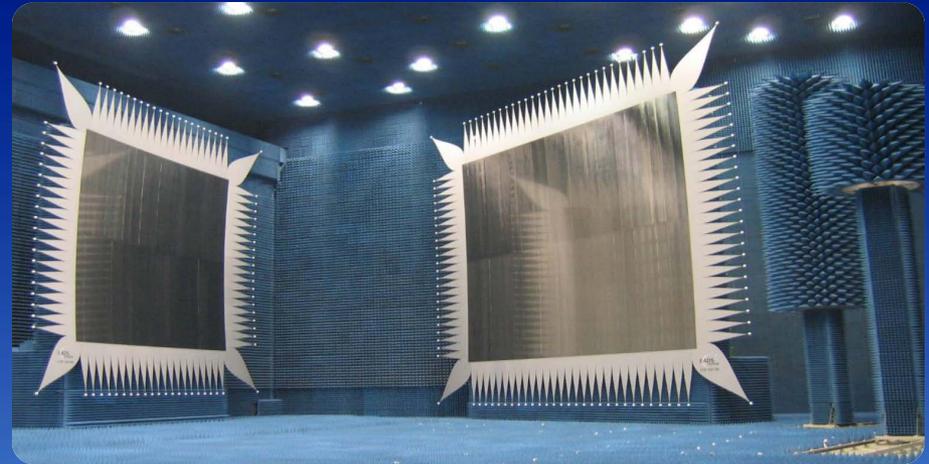

Prime contractor for over 30 telecommunications satellites

➤ Turnkey Solutions

- Consultation
- Orbit Frequency Coordination Support
- System Design & Integration
- Satellite Manufacture
- Launch and In-orbit Operation Support
- KHTT

➤ Mature DFH platform series for telecommunication, broadcast and customized missions

➤ Reliable and customized payloads

Remote Sensing

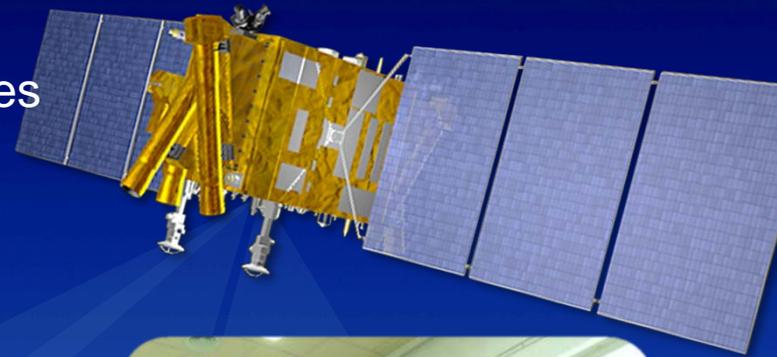

Core Player for over 80 Remote Sensing Satellites

Space to Ground turnkey solutions

Versatile LEO/SSO/GEO satellites and constellations

High performance and innovative bus & payloads

Reliable ground application system

Navigation

Prime constructor of China's Beidou Navigation Satellite System

- The 1st generation: 4 satellites
- The 2nd generation:
 - 16 satellites offers regional services for Asia-Pacific area by 2012.
 - 35 satellites will offer global coverage by 2020.

Beidou navigation satellite applications

- Intelligent transportation
- Disaster Relief
- Emergency Command & Control
- National security
- Precise Timing

Space Science Exploration

A prime in China's Space Science Exploration Missions by delivering over 15 satellites

Prime contractor of China's Lunar & Mars Exploration Program

CAST carries out lunar exploration by three steps.

Orbiting

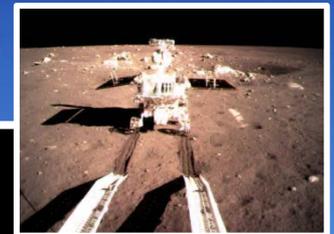

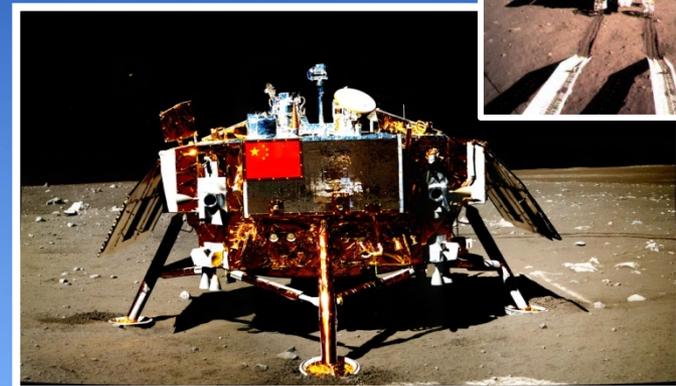

Orbiting around the moon

Landing

Soft-landing on the moon surface

Returning

Sample collection of moon surface and returning to the Earth

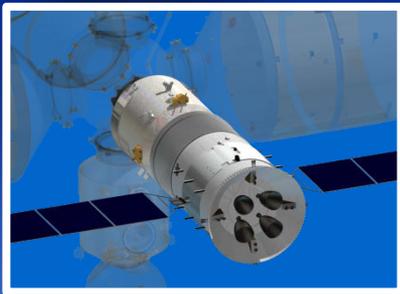

Human Space Flight

Founder of China's Manned Space Program

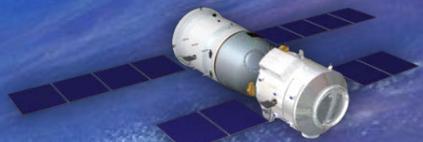

Successfully launched 10 Shenzhou spaceships and 1 Space Lab, will build China's first space station

China's Manned Space Program is implemented by three steps.

Manned Space Flight

STEP 1

EVA, rendezvous & docking

STEP 2

70-ton Space station

STEP 3

Launches 2014/2015

2014

Remote Sensing

(14 in total)

SJ-06/07/08

GF-2

Global Partners of CAST

Introduction of CAST's Calibration activities

Calibration of CAST

- Dunhuang
- Yili
- Baotou
- Hami
- Huailai
- Heihe
- Songshan
- ...

**Calibration
Validation**

- GF-1 (Pan/MS)
- GF-2 (Pan/MS)
- ZY1-02C/04C (Pan/MS)
- ZY3 (Pan/MS)
- HJ-1A/1B/1C (Pan/MS)
- SJ-9 (Pan/MS)
- HY1B (Pan/MS)
- FY-3 (HSI)
- GF-5 (Pan/MS/HSI)
-

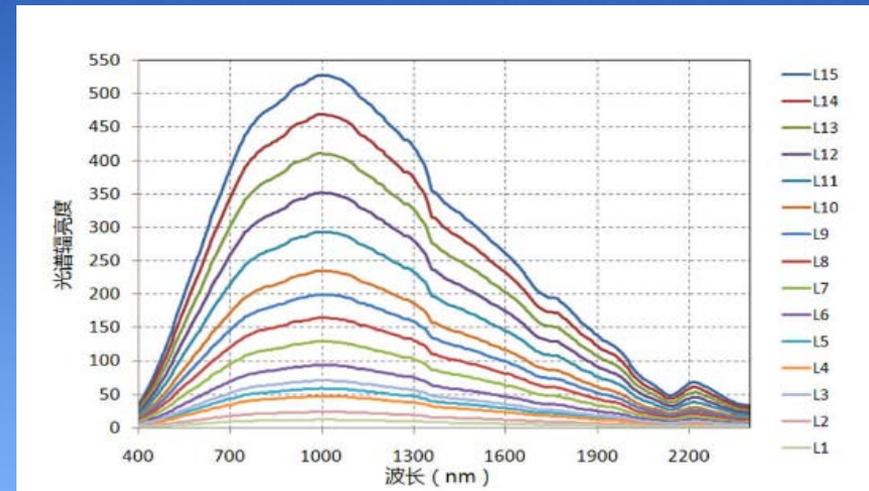

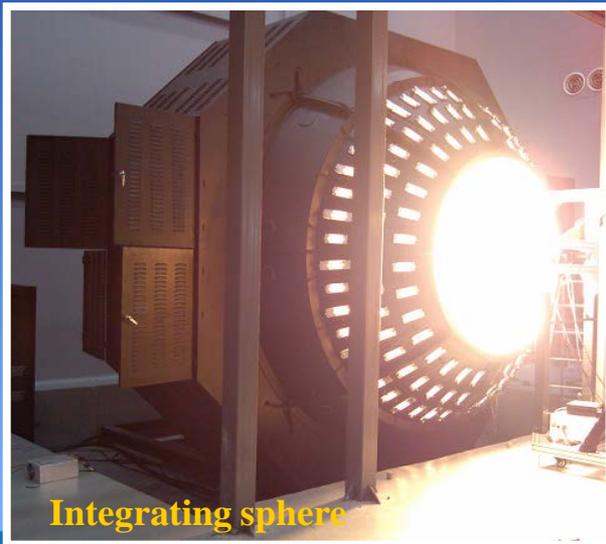

- Establishing various cal & val sites in China and abroad
- Providing consistent sensor calibration service including Pan, MS and HIS
- Calibration service for clients can be included in turn-key solutions by CAST

Pre-launch radiometric calibration

Integrating sphere system:

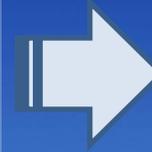

- Uniformity: >99% Angle: >30°
- Diameter: 4m
- Calibrated sensor's diameter: 1.6m(suit for China's largest camera)
- Levels: 32

Pre-launch radiometric calibration

- Integrating sphere with large diameter($D=4m$)
- Collimator with long focus($f=50m$)
- Blackbody with large diameter
- Repeatable test, including thermal vacuum test, vibration test.....

Advanced Instruments
Innovative Methods

Higher precision

Blackbody

Collimator

Pre-launch geometric calibration

- Accuracy of 2D revolving table: 1" for Horizon and 2" for pitch
- Photoelectric goniometer: 0.02"
- Sub-pixel center position: 1/14pixel
- 1:5000 mapping cameras
- Camera: f:20m D:1m

Interior orientations testing instrument

Higher precision

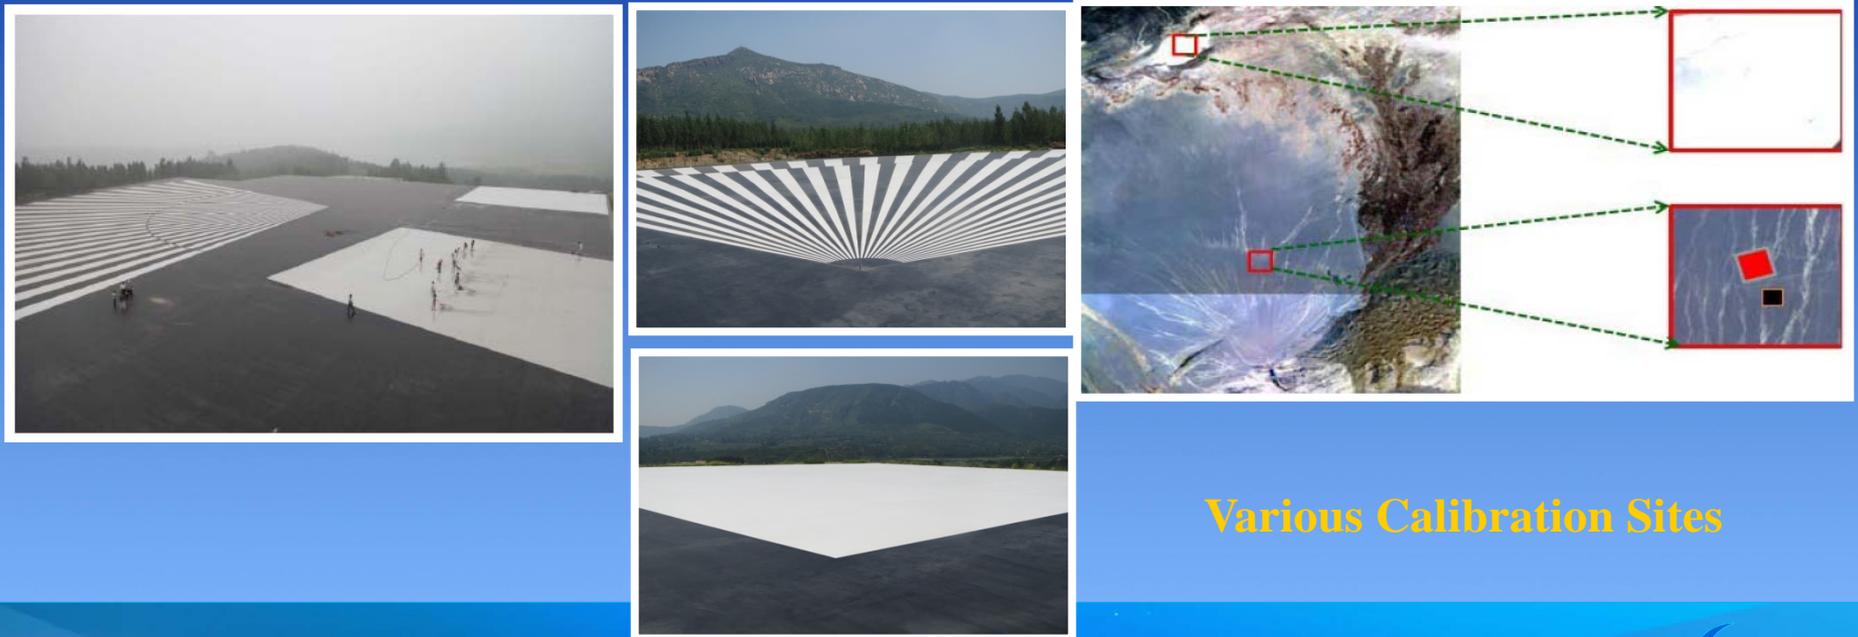

ZY-3

In-orbit radiometric calibration

- **statistical methods and pre-launch data to improve the accuracy of relative radiometric calibration**
- **Multiple bar-pattern with different reflectivity to improve the accuracy of absolute radiometric calibration**
- **Various calibration sites**

Various Calibration Sites

In-orbit geometric calibration

□ Calibration method:

- a step-by-step calibration model
- Interior Calibration + Exterior Calibration

□ Geometric calibration parameter:

- Exterior orientation elements
- Interior orientation elements in every imaging CCD array
- Each linear array geometrical relationship in camera
- Camera geometrical relationship in satellite platform

Calibration period: 3 months
Accuracy: sub-pixel

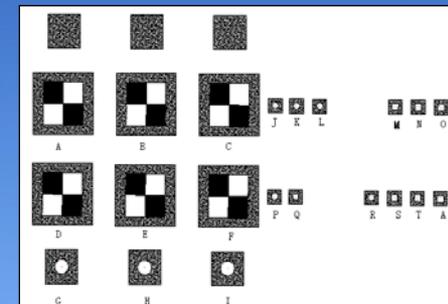

Songshan cal site

- 50km × 40 km

Yili cal site

- 120km × 30 km

Bar-pattern target

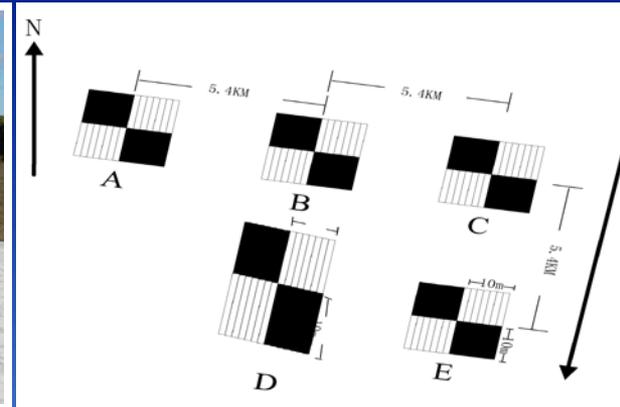

Latest Cal/Val activities of CAST

ZY-3 satellite

In-orbit calibration (with CSIRO)

- ❑ Stereometric mapping: EO mode + Surveying mode
- ❑ Assess for the stability of intersection angle
- ❑ Bar-pattern targets with 2400m² coverage
- ❑ Accuracy of relative radiometric calibration: ~1%
- ❑ Accuracy of absolute radiometric calibration: <7%

various targets

GF-2 satellite

• Pre-launch calibration

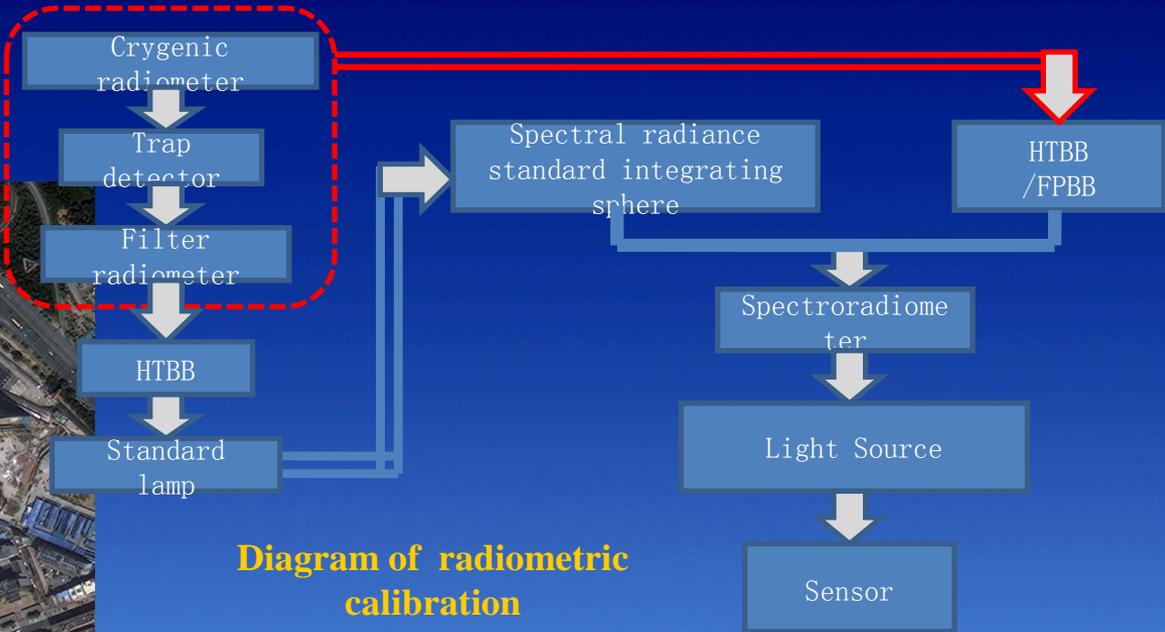

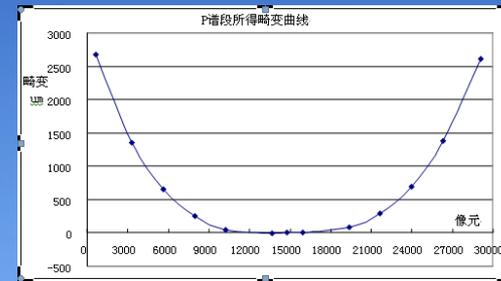

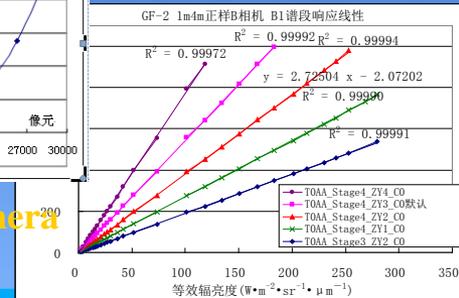

Diagram of radiometric calibration

- ❑ Launch date: 2014.8
- ❑ GSD: 0.8 m @ 631.5km
- ❑ SWATH: 45 km
- ❑ 1 Pan and 4 MS bands covered 450nm-900nm
- ❑ Accuracy of relative radiometric calibration: <1%

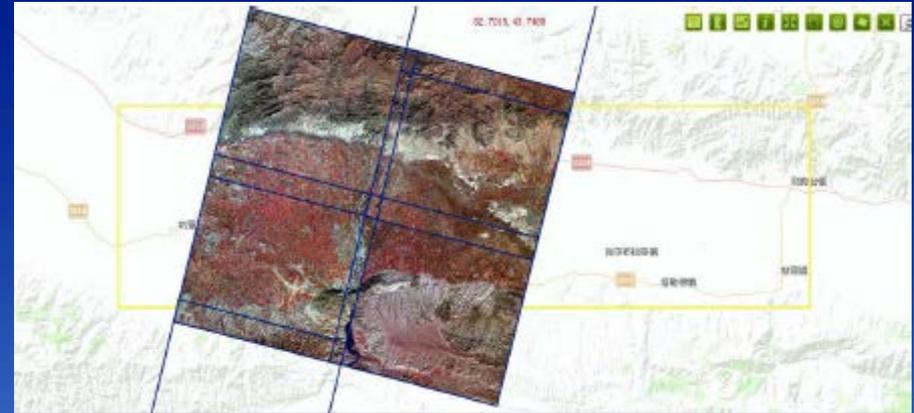

Aberration of GF2 A-camera @Pan band

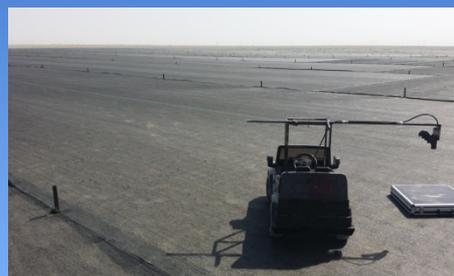

Linearity of GF2 B-camera @B1 band
China Academy of Space Technology

GF-2 satellite

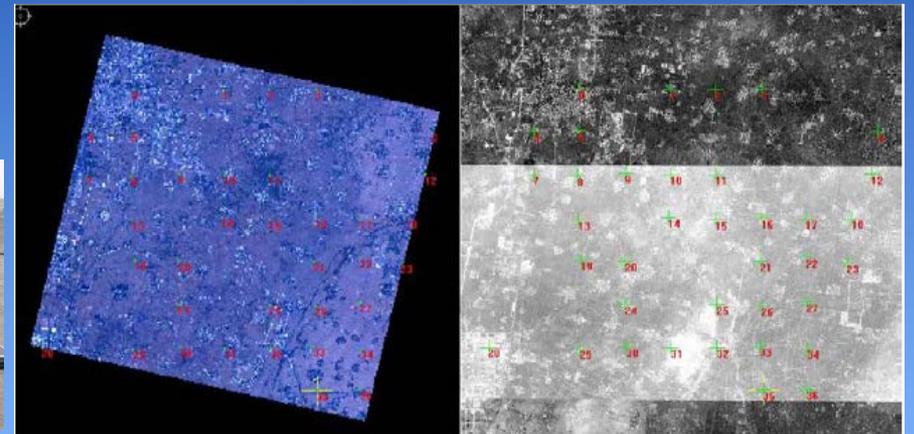

- **In-orbit calibration**
 - ❑ Accuracy of relative radiometric calibration: <1%
 - ❑ Accuracy of absolute radiometric calibration: <7%
 - ❑ Accuracy of internal geometric calibration:
 - Along track 1.3m
 - Across track 0.7m

Coverage of cal site

Cal site

MSS image and control points

GF-4 satellite

- 1st GEO high resolution satellite in China
- GSD:50m
- Swath: 500km-500km
- Bands: 1 Pan +4 Ms+ 1 Infrared
- Launch date: 2015

Pre-launch calibration has been completed. The in orbit test and calibration will be finished in 2016.

GF-5 satellite

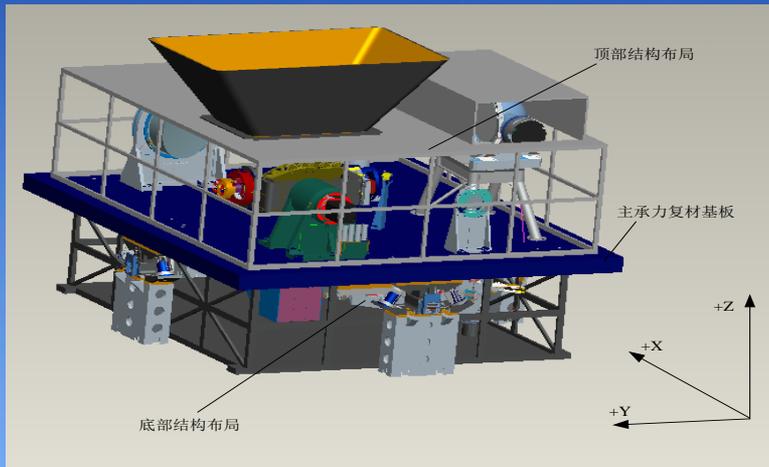

➤ Hyperspectral Sensor Calibration (with TNO of Netherlands)

□ Collaboration

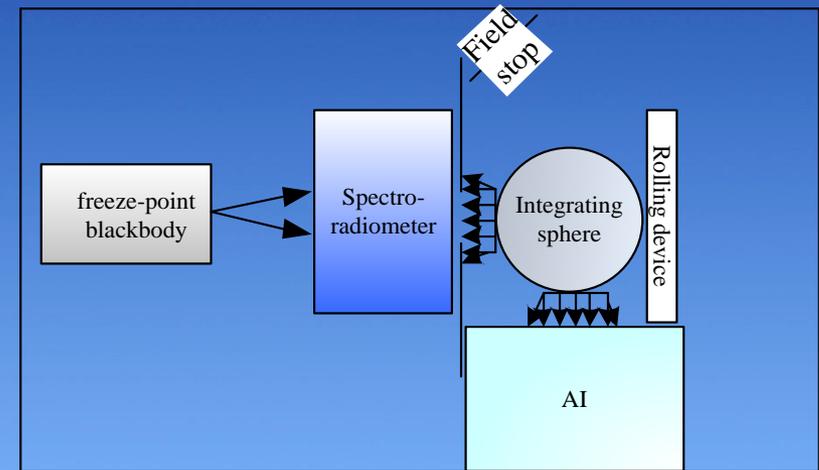

- Space Optical Instruments Joint Laboratory
- atmospheric detection, deep space exploration.....

□ Hyperspectral Sensor

- The error of the spectral calibration : $<0.005\text{nm}$
- Launch date: 2016

Hyperspectral sensor for atmosphere detection

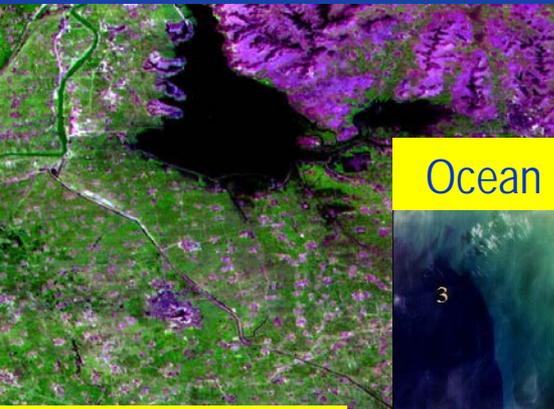

Absolute Radiometric Calibration Configuration

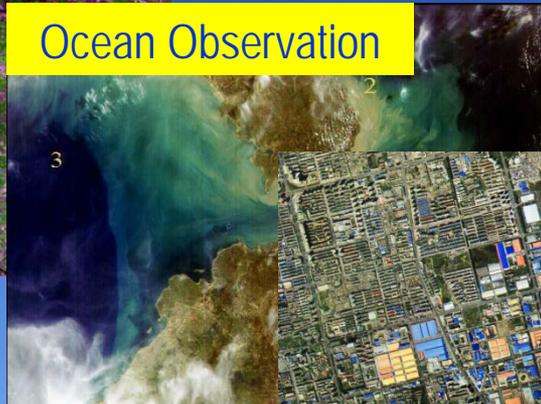

Future Plan

- More optical remote sensors
- More challenges
- More expectations
- More collaboration

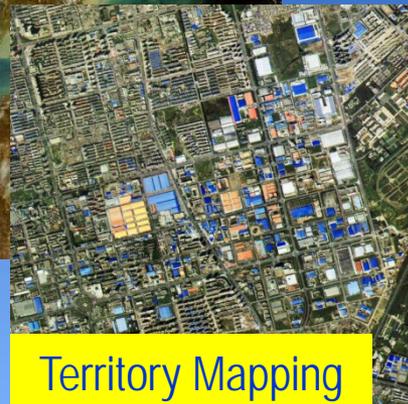

- Land Observation
- Ocean Observation
- Territory Mapping
- Disaster/Environment Monitoring
- Atmosphere Detection
- Deep Space Exploration
- Scientific Experiment
-
