Hurricane Matthew in Haiti (4-5 October, 2016)

- 546 dead, 128 missing, 439 injured (PDNA)
- Winds of over 230 km/h, more than 600mm of rain in 24 hours
- Devasting storm surge in Jérémie, les Cayes, Port-Salut cities
- Devastating winds throughout Macaya park (major woodland impact) and in agricultural areas (lost season)

« Recovery Observatory » (RO)

- *Satellite images not only for emergency response, but for post-crisis and recovery / reconstruction too.*
- *Collaborative effort to increase ease of access to satellite imagery and derived information products for all post crisis steps.*
- *Concrete actions bringing together national actors and international stakeholders, answering concrete needs along recovery timeline.*

Geo-Information required in Response & Post-crisis / Recovery

Open and free collection of **satellite images & derived maps** at several scales during months / years after Disaster

Strong Capacity Building component fitted to local users

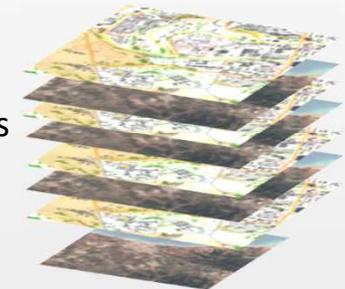

Field data (indispensable): terrain validation data, aerial and drone data, statistics, cartography,

Overview area

Mid-scale products from Sentinel data at 10m -20m resolution

- LandCover/LandUse change in open areas
- Gain or loss of vegetation
-

Update frequency: every 10 days to 6 months

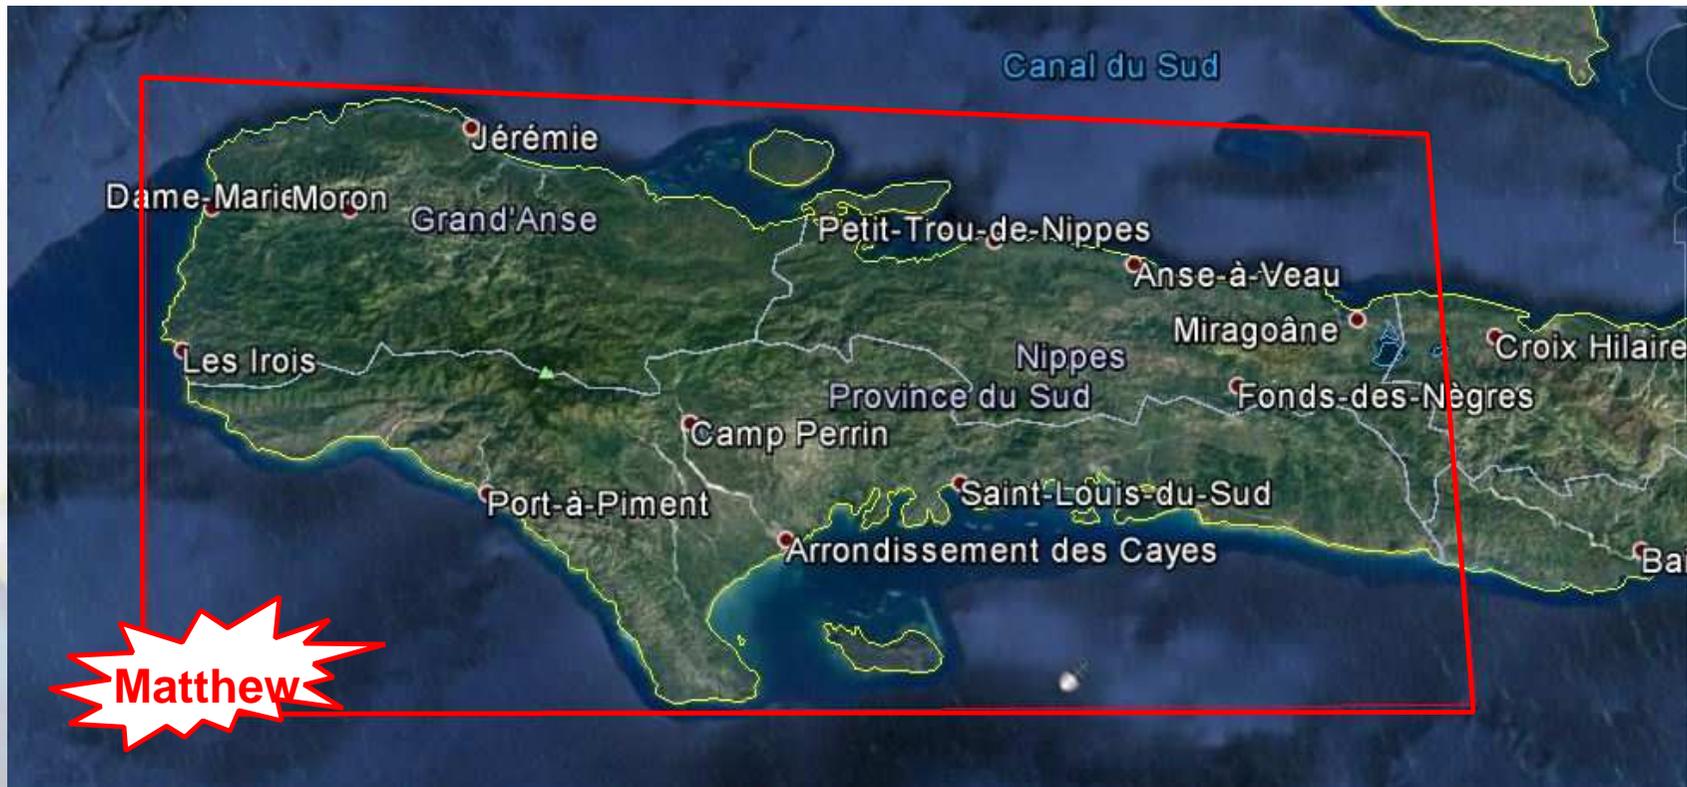

Hot spot zooms

Large scale products from very high resolution data : 0,5 – 3m

- Urban areas, settlements, IDP camps
- Protected areas, sensitive areas
- Infrastructures, ...

Update frequency: every 2 to 4 months

CNES: set up of RO infrastructure, full-time project manager for three years, two missions a year to Haiti, consultant support for strategic coordination and support to workshops, user consultations and SC, support to value-adding during early months (feasibility testing, new products); SPOT, Pleiades data

ASI: CSK data, dedicated terrain motion research effort to develop Sentinel-1 processing chain on GEP for Haitians, participation in RO SC and missions to Haiti, funding for CIMA for watershed analysis and use of RASOR risk management tool over RO area

DLR: full TSX coverage of area at 3 m every three months for duration of project (change detection baseline for ASI terrain motion work)

ESA/EC: Copernicus activations (3 RO dedicated, in addition to initial response), Sentinel-1 and 2 imagery, GEP platform for SAR processing

NASA: advice on air quality issues

CSA / Roscosmos / JAXA / USGS / CNES : Charter activation data access

ROSCOSMOS

Role of Haitian end-user partners:

- Information on reconstruction projects
- Collection of needs and prioritized requirements for geospatial information
- Linkages with local UE, WB, UNDP teams (and UNEP, IADB,)
- Recommandations on the content and dissemination of RO products (national, local)
- Feedback on usefulness of RO and RO products, improvement of concept

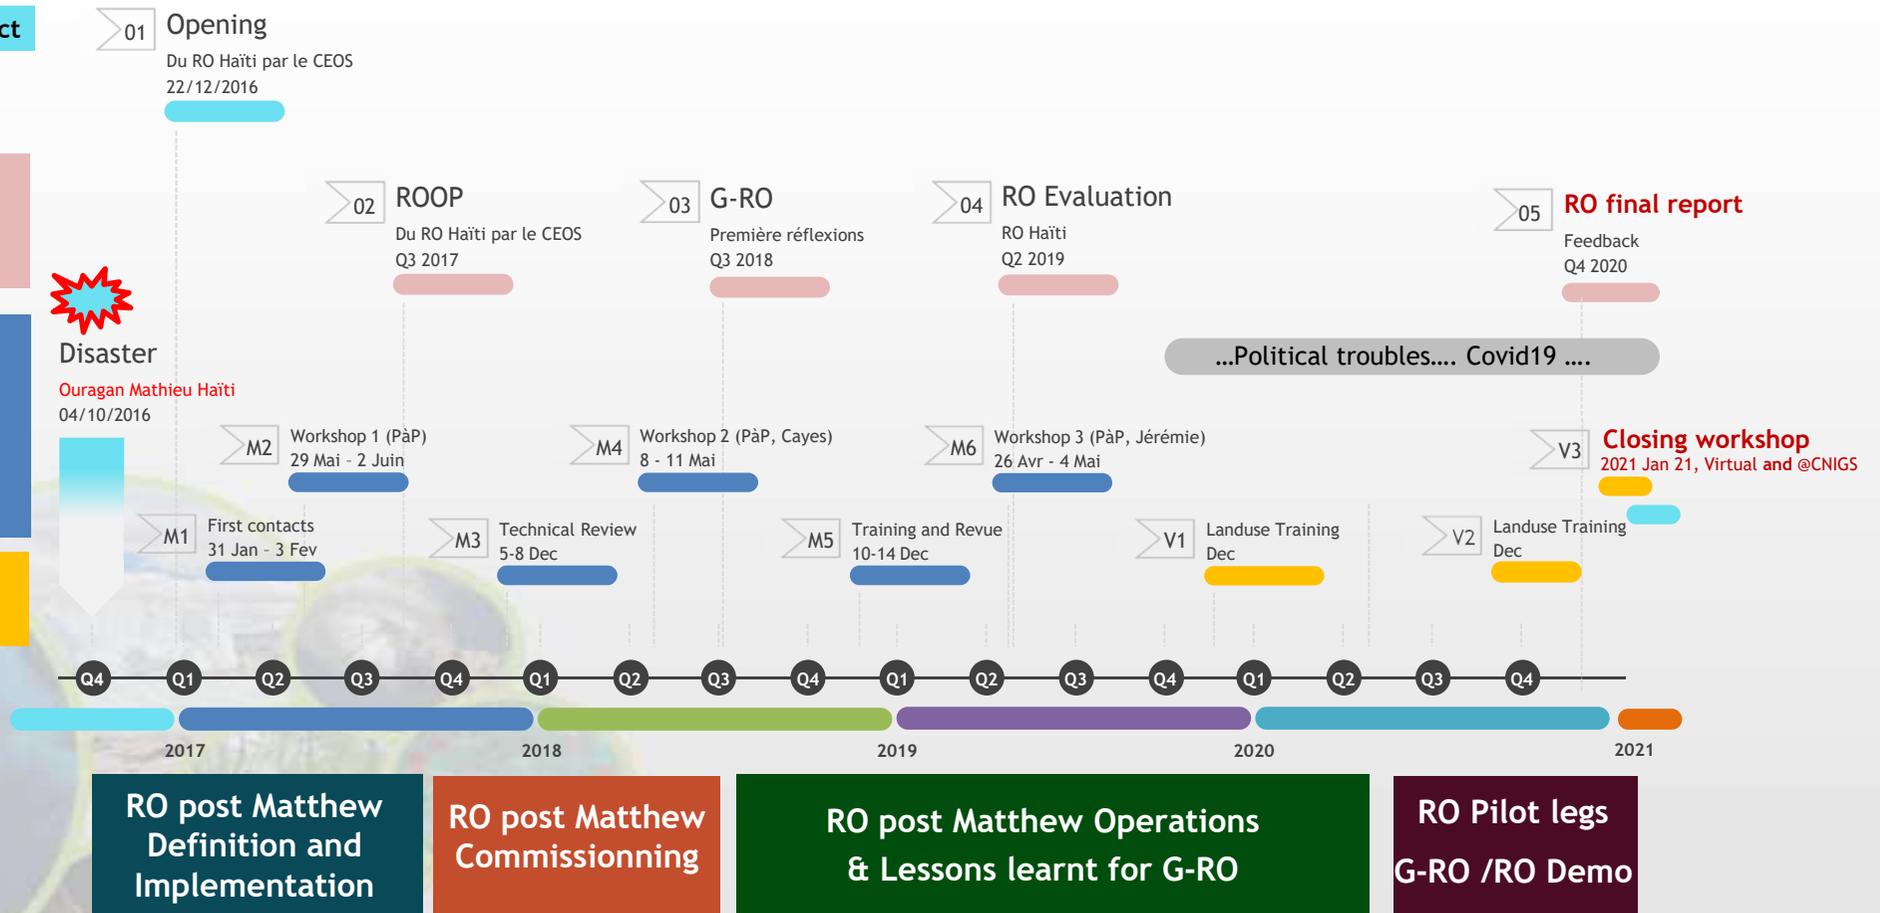

4 years co-led project

Users interface :
needs collection,
feedback, lessons-

Table of thematic areas covered by RO

RO : Tableau des thématiques produits (FR) Avril 2019

| | Produit | Utilisateur-clef | Elaboration | Données satellites |
|---|--|---------------------------------------|---------------------------------|--|
|  | Cartographie du bâti | CIAT / Ministère de la Planification | CNES/SERTIT, Copernicus EMS R&R | Pléiades, WorldView-3 |
|  | Mouvements de Terrain Détection de Changement | BME / URGeo | ASI, CNES/EOST | COSMO-SkyMed, Pléiades, Spot 6/7, TerraSAR-X |
|  | Bassins Versants | ONEV / Ministère Agriculture | ASI/CIMA Foundation | Pléiades, COSMO-SkyMed |
|  | Agriculture | Ministère Agriculture | Copernicus EMS R&R | Sentinel-2, Spot 6/7, GeoEye-1, WorldView-2 |
|  | Suivi du Parc Macaya | ANAP / ONEV / Ministère Environnement | Copernicus EMS R&R, CNES/SERTIT | Spot 6/7 |
|  | Impact Environnemental | ONEV / Ministère Environnement | Copernicus EMS R&R | Sentinel-2, Spot 6/7, Pléiades, WorldView-2 |
|  | Occupation du sol | Tous | CNIGS, CNES | Sentinel-2 |

Seven thematic areas addressed, with different **technical readiness levels** :

Operational products (« off the shelf »), Scientific / R&D product

In addition, the RO initiated important work at ONEV request relating to “air quality” and “coral reef monitoring”

Thematic experts – always a team: one Haitian, one international expert

| Produit | Utilisateur-clef  | Elaboration  | Point focal / Responsable thématique  | Institution |
|---|--|---|--|---------------------------|
| Cartographie du bâti | CIAT/Ministère de la planification (MPCE) | Copernicus EMS RRM ; SERTIT (faisabilité) / CNIGS | Rose-May GUIGNARD | CIAT |
| | | | Pierre Alexilien VERSAILLE | MPCE/ CNIGS |
| Occupation du sol | Tout utilisateur (données de référence) | CNES (méthodologie) / SERTIT (formation) /CNIG (production) | Jacques Philemon MONDESIR | MPCE / CNIGS |
| Impact environnemental | Ministère de l'environnement (MDE) | Copernicus EMS RRM | Pierre Emmanuel PHILIPPE | MDE/ Directeur des forêts |
| | | | Saint Phar JEAN | MDE/ ONEV |
| Agriculture | Ministère de l'agriculture (MARNDR) | Copernicus EMS RRM ; SERTIT (faisabilité) / CNIGS | Ognel PIERRE-LOUIS | MARNDR/ DRFS |
| | | | David TELCY | MPCE / CNIGS |

CEOS

EMSN051_06POINTEABACOU_01MANGROVEPREEVENTSITUATION_OVERVIEW_v2_300dpi.pdf 1 / 1

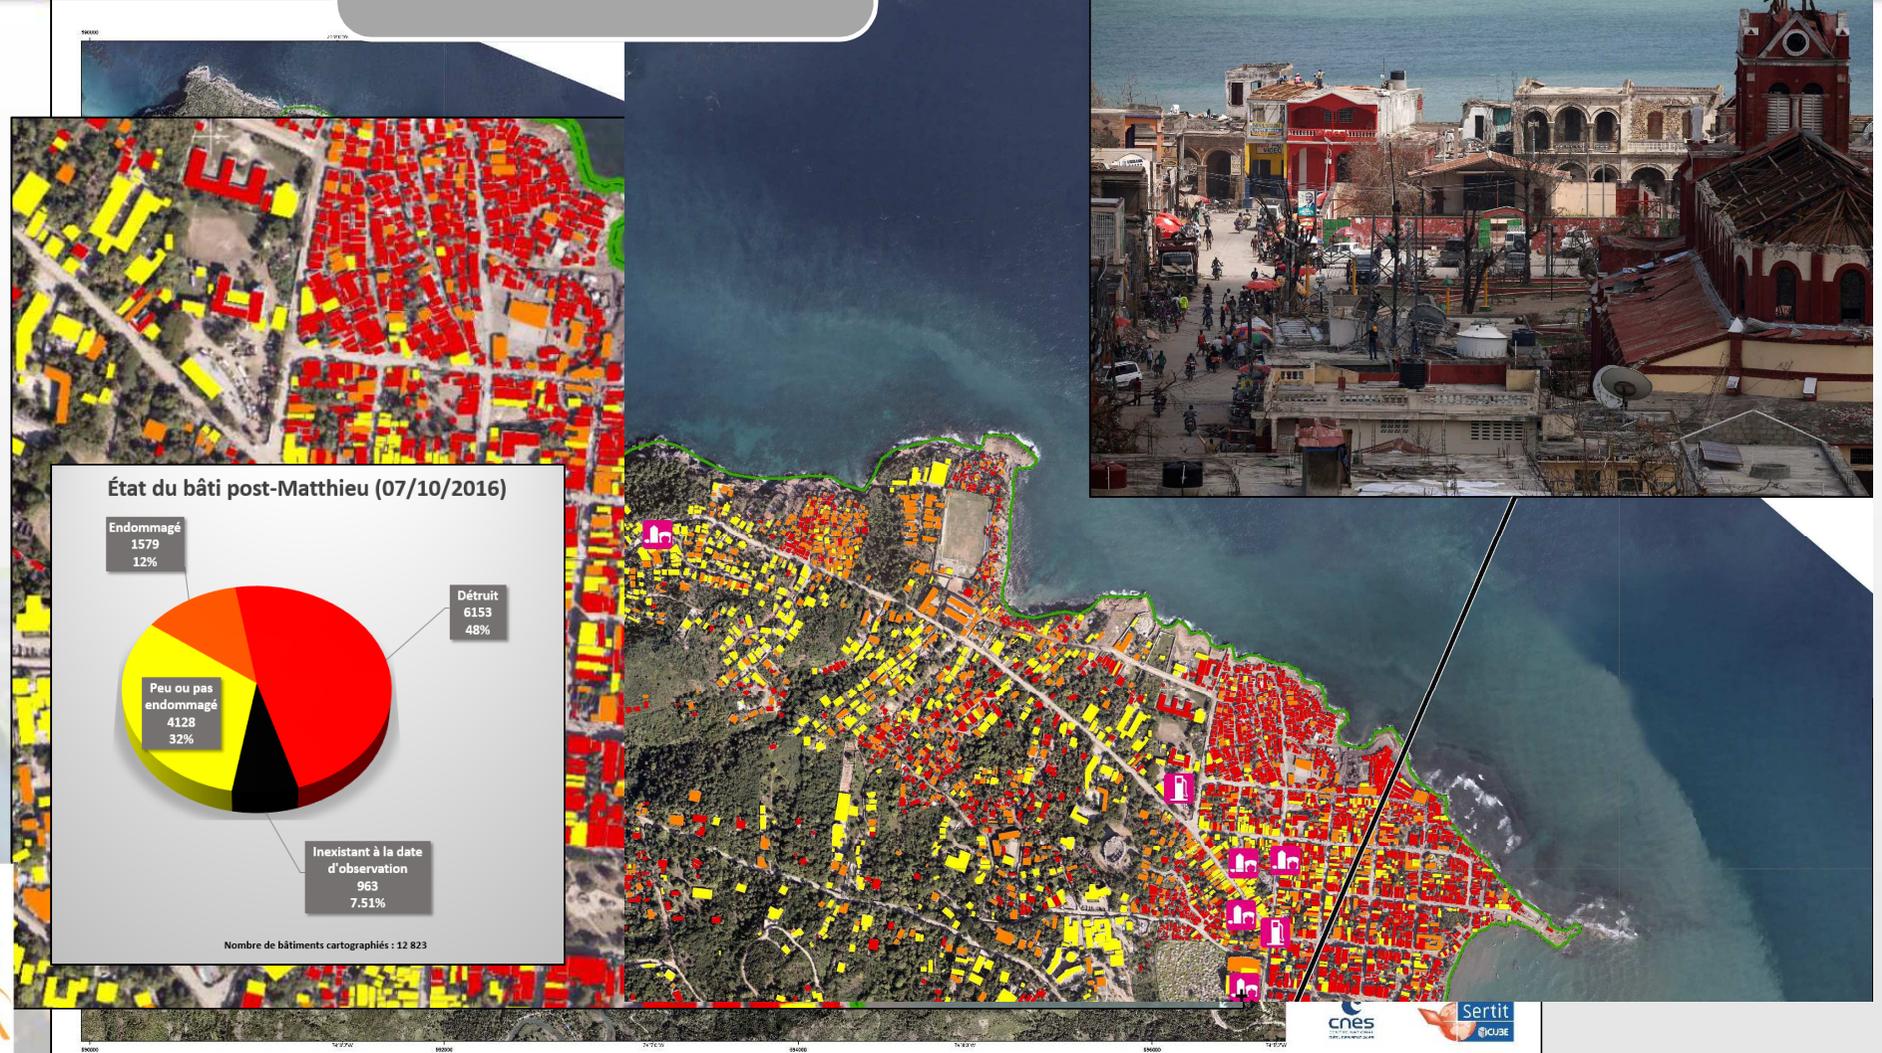

- **CNES-sponsored SERTIT feasibility products:** damages and change in Jeremie, early impacts on Macaya Park, early impact on agriculture
- **Three Copernicus EMS R&RM activations:**
 - EMSN 50 : Impact on 2 urban areas and IDP camps
 - EMSN 51 & 65 : Impact on agriculture, coastline and vegetation (Macaya)
- **ASI internal work & CNES-sponsored EOST work on ground motion**
- **Critical contributions to the Haiti RO:**
 - Agricultural impact and recovery,
 - Damage to built areas and reconstruction (Cayes, Jérémie),
 - Macaya Park woodland impact and regeneration progress,
 - Ground motion and Landslides detection and inventory
 - Mangrove impact (*shown here, Pointe à Bacou*)

Terrain motion

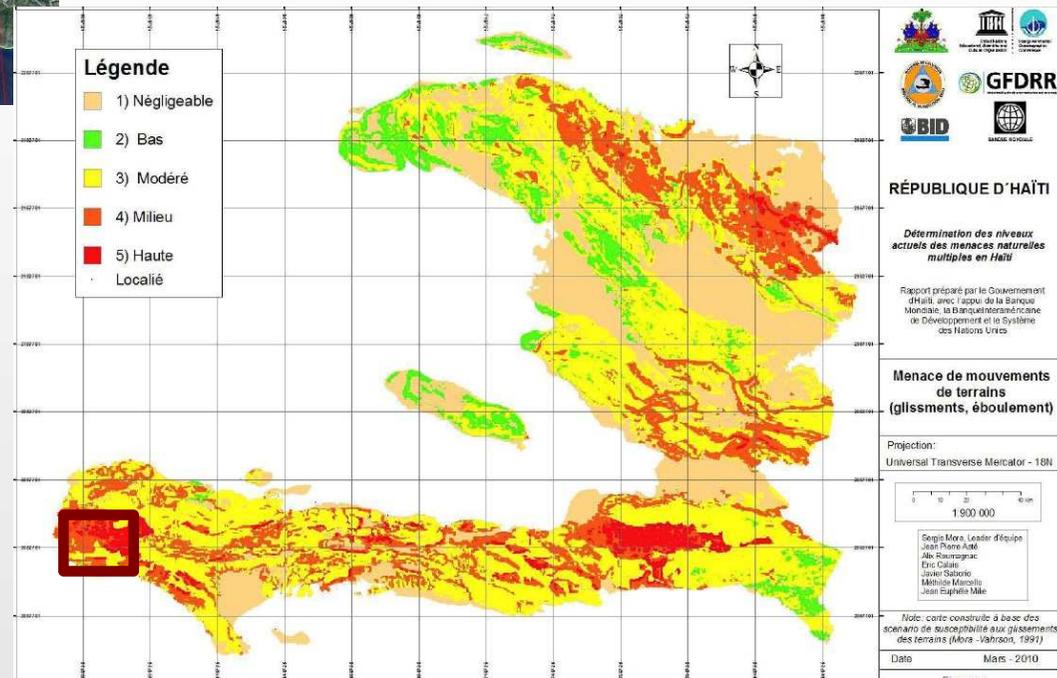

Post-Matthew landslide detection and mapping

Landscape after Matthews
Major rain events

First landslide susceptibility map in Haiti with optical images
Topography = first driver of landsliding

Application of ALADIM to pre/post-Matthew images (SPOT6 & SPOT7)
Les Anglais Cordillera (West Haiti)

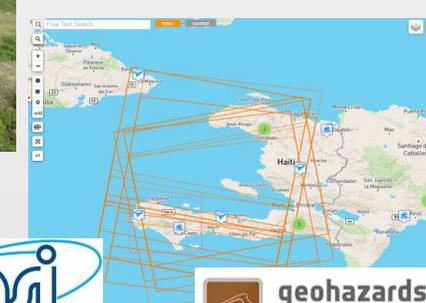

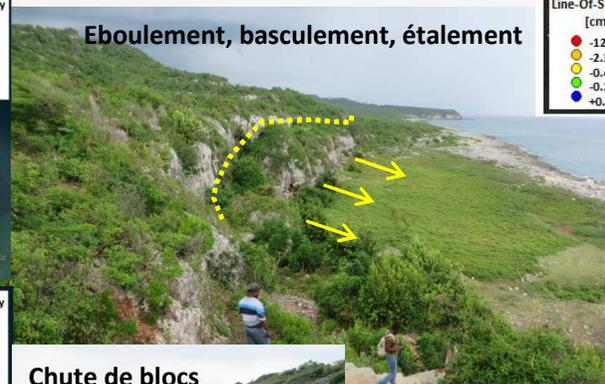

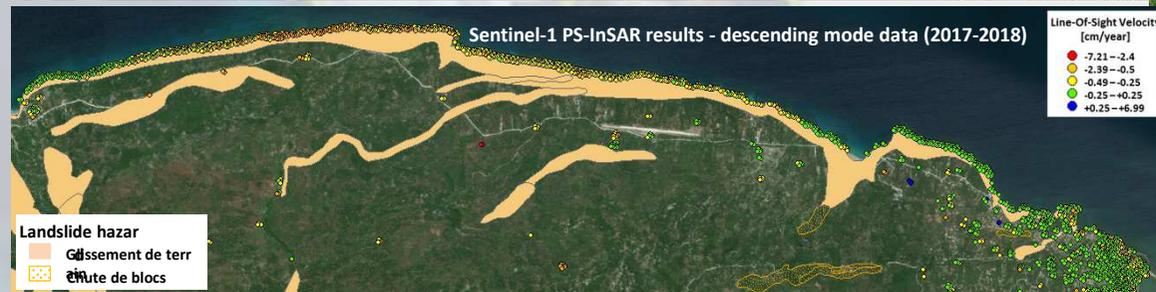

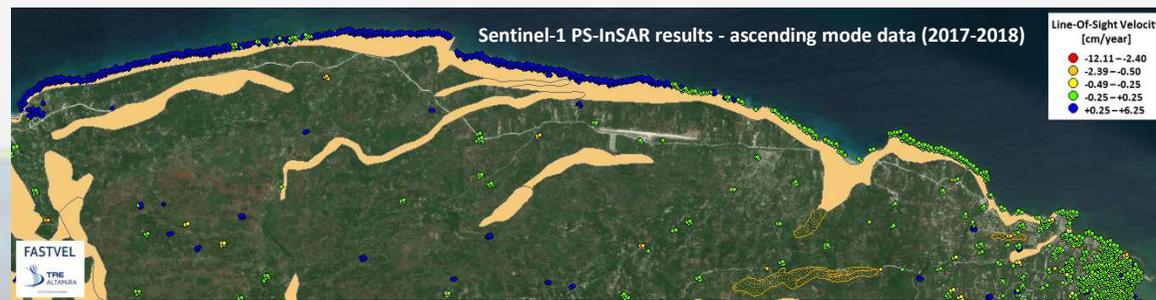

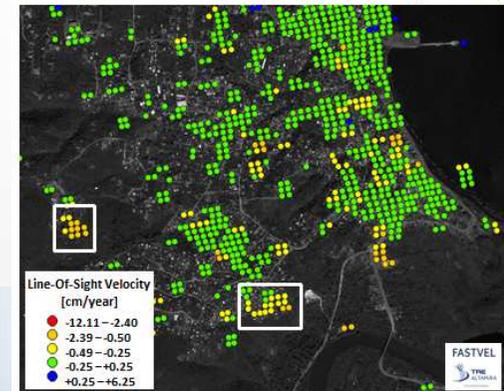

Methodologies

- SAR interferometry (InSAR) and change detection methods
- Advanced multi-temporal InSAR and landslide motion time series
- Ground validation with CNIGS/BME on May 2019

Coastal process and hazards / ground validation

Post Matthew urban changes and induced risks on Jeremie

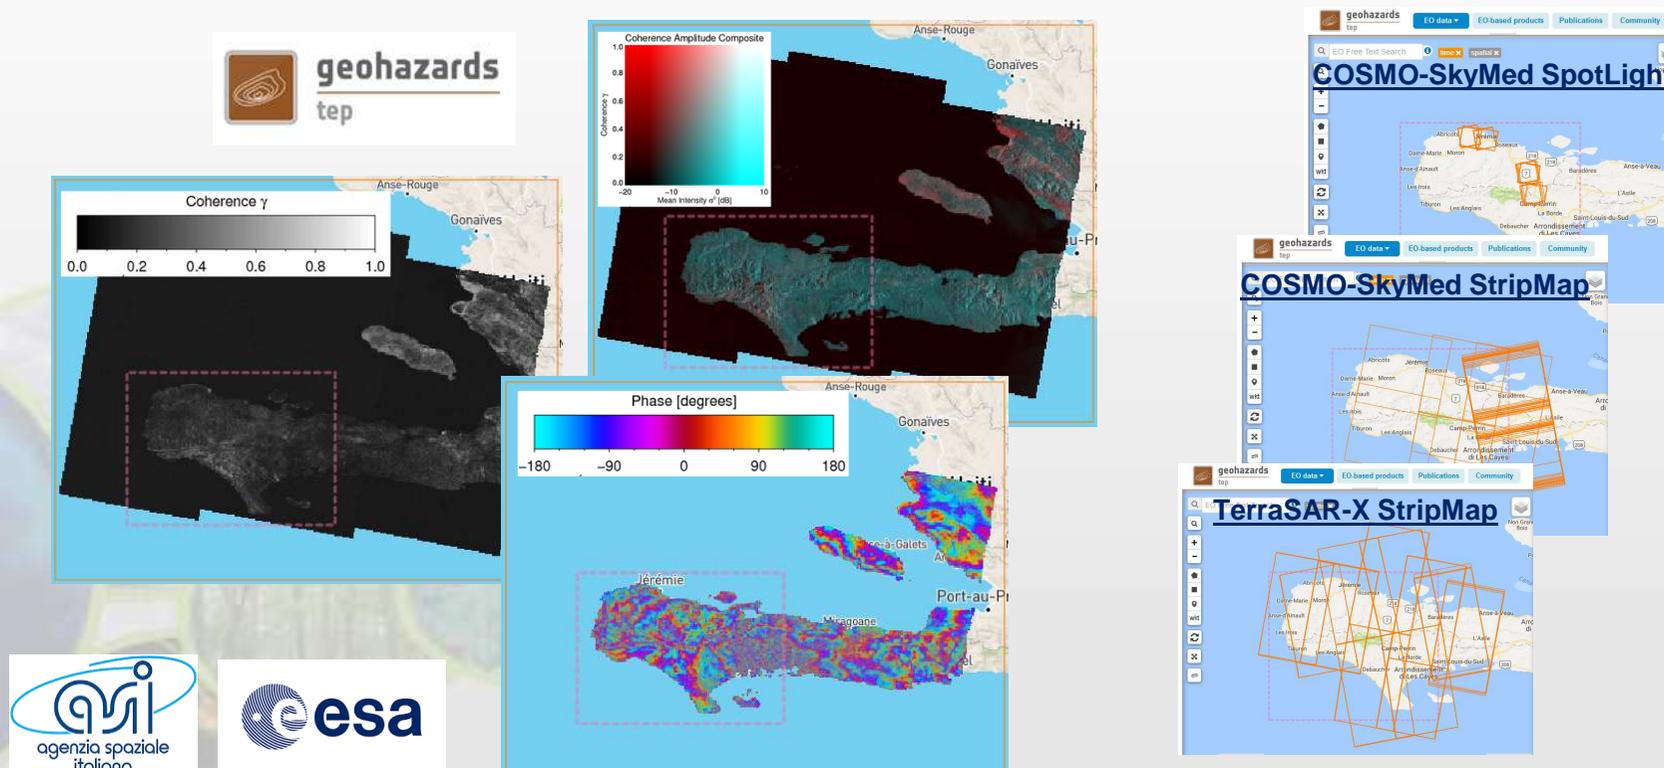

Sentinel-1 PS-InSAR results - ascending mode data (2017-2018)

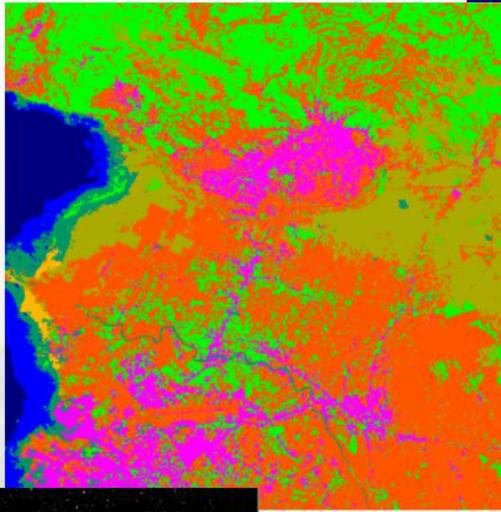

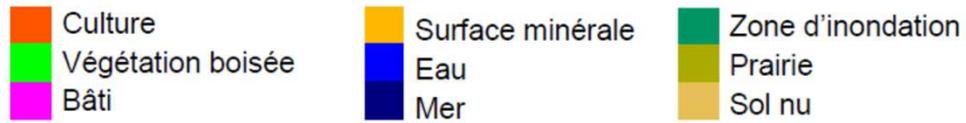

Terrain motion products based on satellite SAR

Exploitation of ESA's Geohazards Exploitation Platform (GEP)

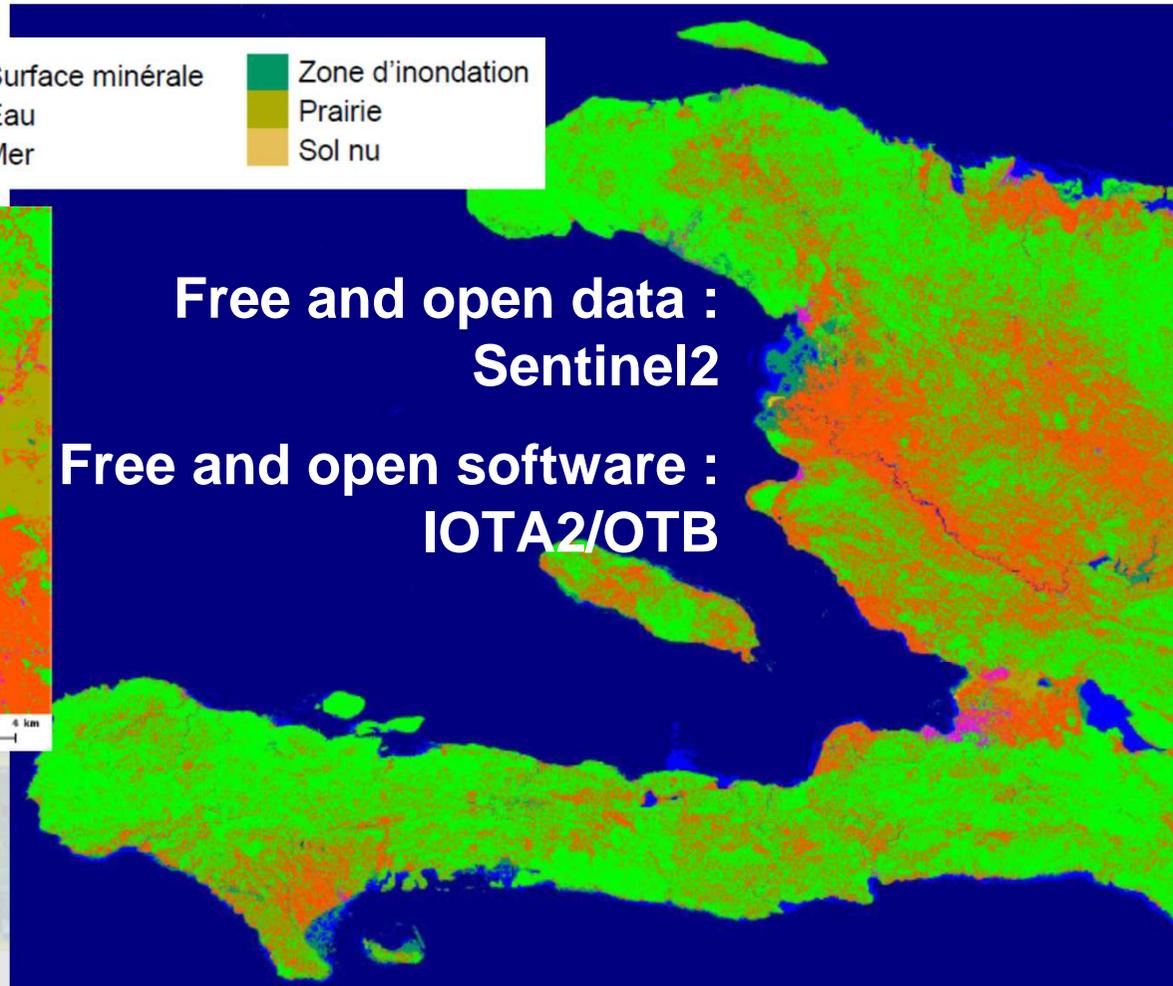

- Service allowing **detection of deformation and surface change** with Sentinel-1
- RO team developing **specific Haiti approach** for ease of technology transfer
- Cloud-based approach will be **implemented for Haitian users** even after RO

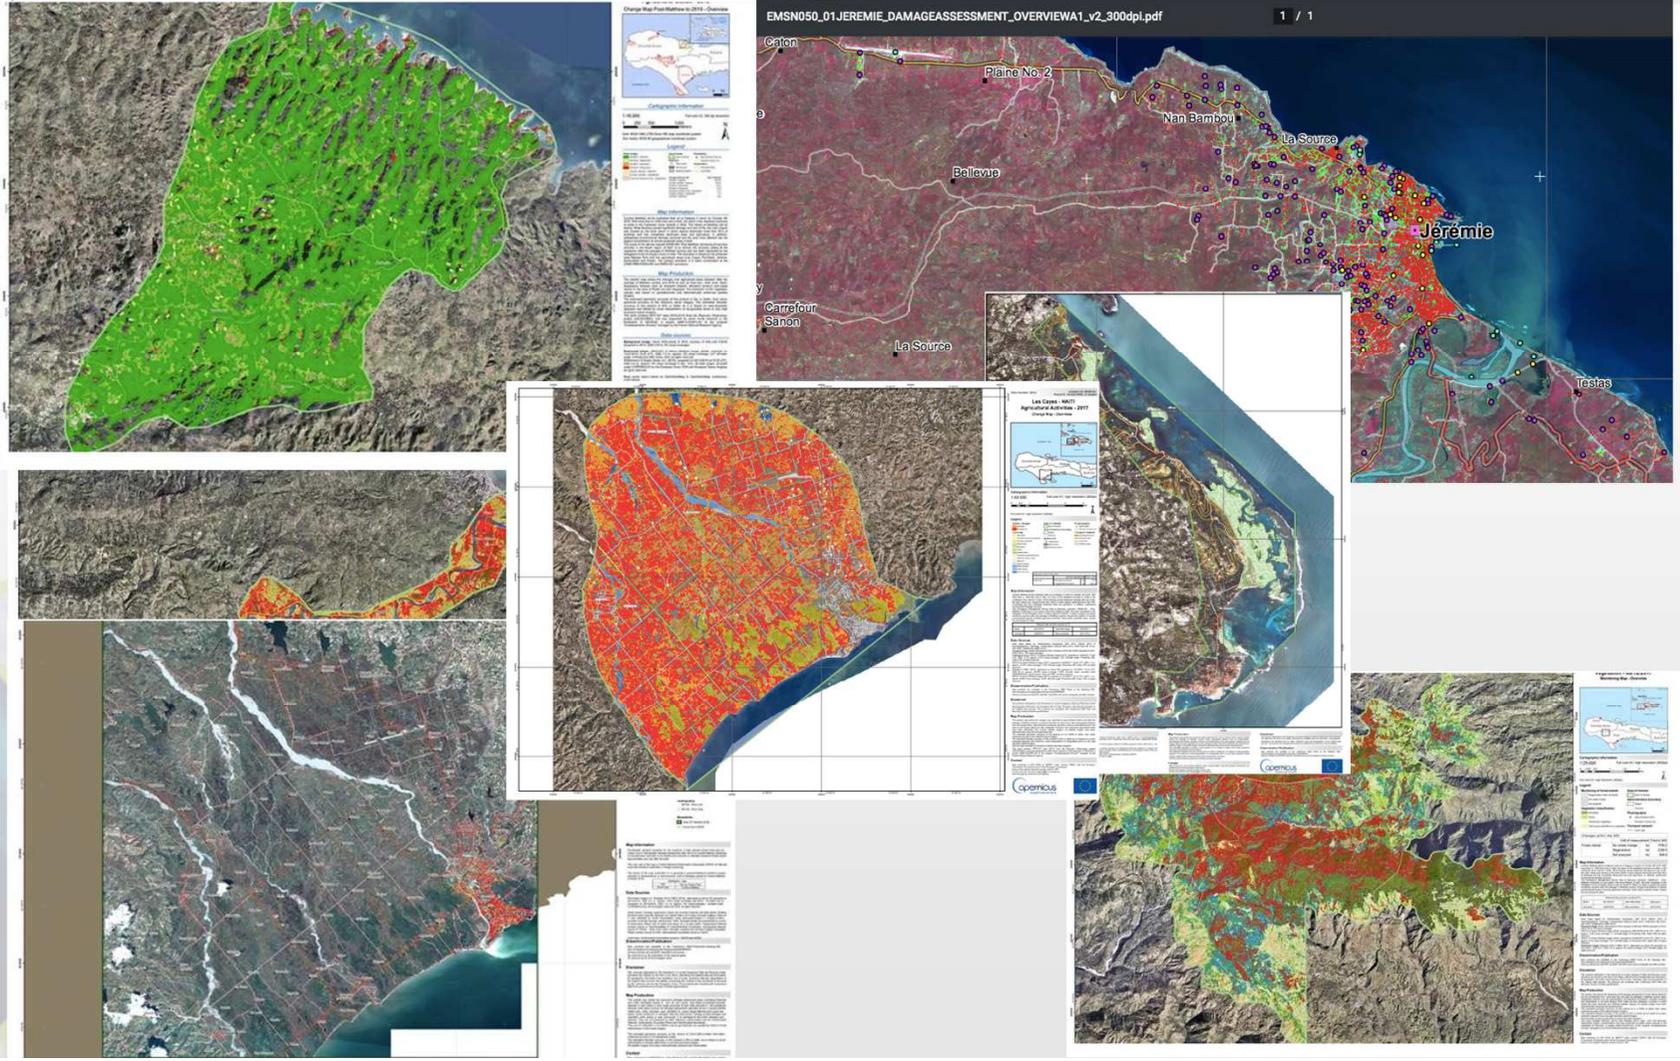

**Free and open data :
Sentinel2**

**Free and open software :
IOTA2/OTB**

RO hotspot zooms: Macaya park, urban and agricultural areas at Les Cayes and Jérémie, Pestel et Dame-Marie, Mangrove at Pointe-à-Bacou

The Capacity Development RO plan targeted **two distinct communities**:

- **Remote sensing and GIS professionals**, capable of producing products derived from satellite earth observation images
- **Professionals** who carry out **thematic monitoring** of the territory, using EO derived products in their organizations, having the basic knowledge to understand how they were made and their limits of representativeness.

Details of the objectives in the "RO Capacity Development Plan"

In parallel, several specific actions have been carried out towards **academic community**

Producer training (CNIGS):

Technical seminars on RO thematic products
Land Use IOTA-2 training for Sentinel-2

User training (ONEV, CIAT, BME)

Academic training (UEH/URGEC)

Introduction to space technologies
Introduction to optical spatial imagery
Earth observation for risk management
Land use classification with free software IOAT
Examples of applications with SAR imagery

Activities postponed to 2021 (Covid)

Basic GIS training by the CNIGS in the region - "outreach caravan"

Basic radar data processing training by ASI (two CNIGS executives in Italy for 3 months)

RASOR and WASDI training by CIMA on WB financing (two CNIGS executives for 3 weeks in Italy)

2017 May : World Reconstruction Conference (WRC#3), Brussels

2018 May : Understanding Risk (UR) 2018, Mexico

- WGD event : “Satellite Earth Observation in Support of DRM”
- RO event : “Satellite Support for Risk management in Haiti – an innovative example”
- WB event : “Earth observation for Disaster Risk Financing”

2018 Dec : World Bank BBL, Washington

2019 May : WRC#4, Geneva - “ Facilitating Recovery and Inclusion through Satellite EO”

2019 May : Living Planet Symposium, Milano- ASI paper +CNIGS, CNES, EOST, SERTIT, TeleScop

2019 May : Workshop Copernicus EMS, Stresa

2020 Dec : UR 2020 / WGD session (remote) - “Harnessing the Evolution of Earth Observations and Risk”

2021 Feb : UN GAR, “EO into Action: Systemic integration of EO applications into national risk reduction decision structures leveraging geospatial data infrastructures”

RO-related World Bank interventions for the agriculture in Haiti

- RESEPAG II : « Study on improving climate resilience and productivity in the Plaine des Cayes »
- TPR Nippes : « Resilient Productive Territories Project »

RO-related IDB interventions

- UGP Macaya : « Program for the Sustainable Protection of the High Watershed Lands of the Macaya Park Zone »
- Mangroves : « Elaboration and Execution of the mangrove restoration plan »

RO-related UE Haiti projects :

- Urbayiti : « Resilient cities & urban governance – Les Cayes, Jeremie »

Haiti, now Charter Authorized User

Application of DGPC Haiti to Charter Universal Access on 19/03/2019

Since 27/08/2019, DPC is " Authorized User " registered in the « User Registration Document »

External evaluation process of the post Mathew RO Pilot - Criteria :

- **Relevance:** extent to which project activities were appropriate to the priorities of the target group.
- **Efficiency:** the product achieved the expected results.
- **Effectiveness:** measures whether the project achieved its objectives.
- **Impact:** refers to the positive and negative changes produced by the use of RO products, or by a capacity development intervention;
- **Sustainability:** refers to whether the benefits are likely to continue after the project ends.

Level of achievement :

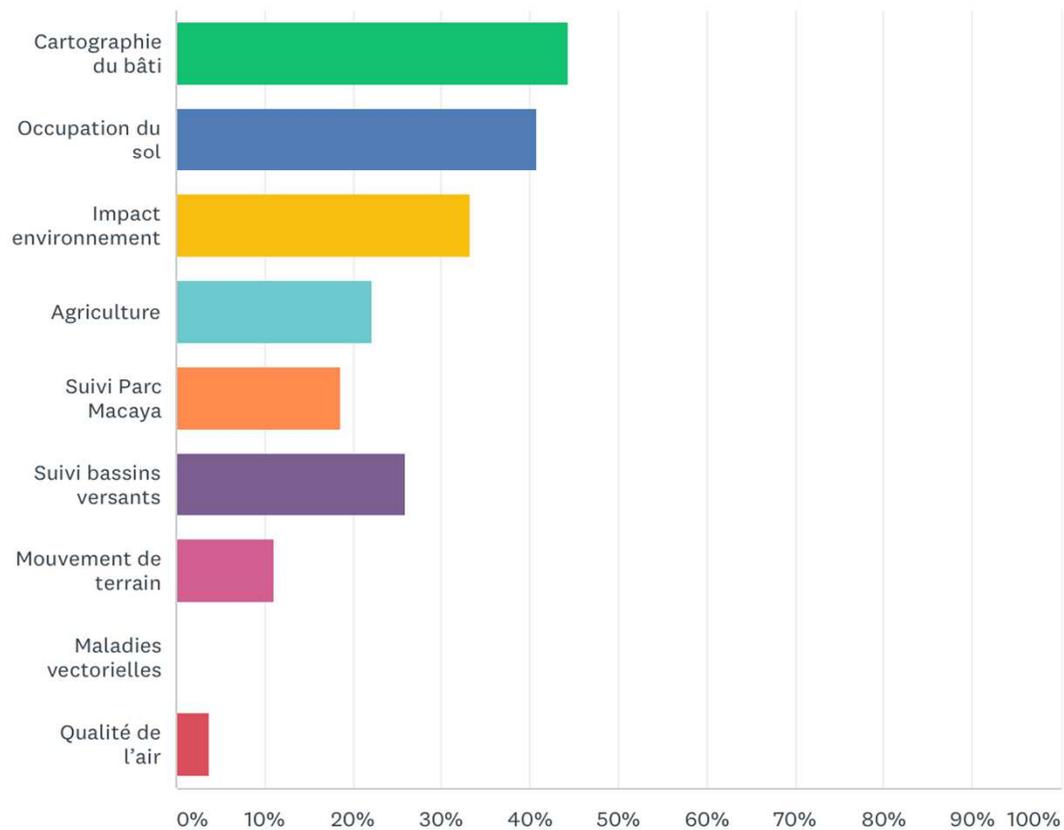

| Taux de réussite | Code couleur |
|--|--------------|
| Entièrement réussi (100% de l'objectif de référence) | Vert |
| Plus que partiellement réussi (51%-99% de l'objectif de référence) | Bleu |
| Partiellement réussi (50% de l'objectif de référence) | Jaune |
| Moins que partiellement réussi (1-49% de l'objectif de référence) | Brique |
| Non réussi (0% de l'objectif de référence) | Rouge |

Initial objectives of RO Haiti and summary evaluation

- **Démontrer la valeur des observations de la Terre par satellite pour soutenir le relèvement post-catastrophe majeure ;**
- **Travailler avec la communauté du relèvement post-catastrophe afin de définir une vision durable en vue du renfort de l'utilisation des données d'observation de la terre ;**
- **Établir des relations** entre les agences du CEOS et les parties prenantes internationales du relèvement ;
- **Favoriser l'innovation** autour des applications de haute technologie pour soutenir le relèvement post-catastrophe ;
- **Soutenir le développement de capacités en Haïti :**
 - Les acteurs gouvernementaux et non - gouvernementaux ont accès à des connaissances détaillées sur l'apport des donnée OT pour répondre à des problématiques post-catastrophe ;
 - Des groupes cibles augmentent leurs capacités à mettre en œuvre des initiatives de relèvement post-catastrophe et de mitigation des risques afin de réduire la vulnérabilité ;
 - Les capacités techniques des organismes en charge de la gestion et production des données géo-spatiales sont renforcées.

A mon avis, la catégorie de produits la plus utile dans les produits RO c'est (choisir deux)

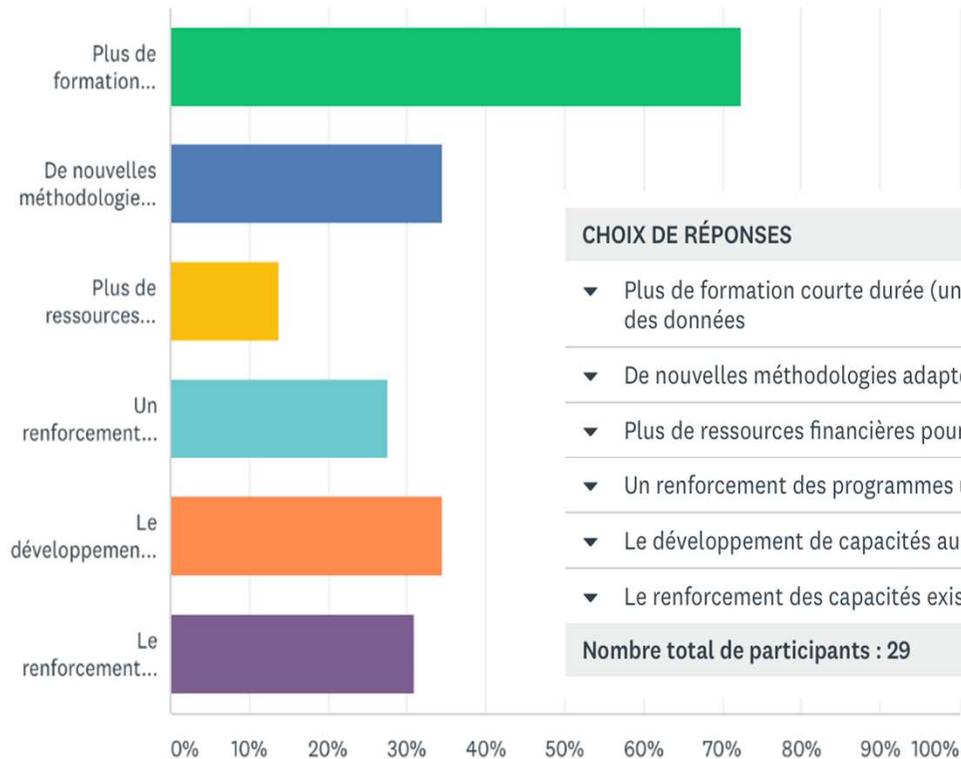

Answered: 27 Skipped: 2

Afin de continuer à renforcer la capacité en Haïti, nous avons besoins en priorité de (choisir deux réponses)...

Answered: 29 Skipped: 0

CHOIX DE RÉPONSES

- ▼ Plus de formation courte durée (une semaine ou deux) sur les techniques d'Observation de la terre et du traitement des données
- ▼ De nouvelles méthodologies adaptées au contexte haïtien
- ▼ Plus de ressources financières pour acheter des équipements
- ▼ Un renforcement des programmes universitaires
- ▼ Le développement de capacités au sein des ministères
- ▼ Le renforcement des capacités existantes afin de consolider et empêcher la fuite des cerveaux

RÉPONSES

72,41% 21

34,48% 10

13,79% 4

27,59% 8

34,48% 10

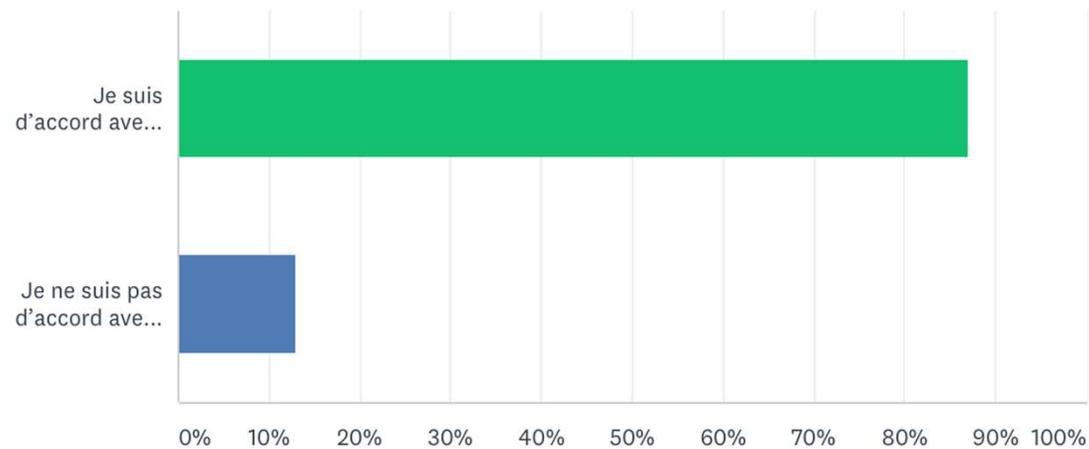

31,03% 9

Nombre total de participants : 29

Dans l'ensemble, j'estime que les produits générés dans le RO et la capacité développée a mené à un legs durable du projet

Answered: 23 Skipped: 6

CHOIX DE RÉPONSES

« Haiti RO Final Workshop » – Zoom 19 January 2021 « Space for Decision-making » National Symposium – @CNIGS and Zoom 20 January, 2021

Each event had 30-40 attendees – four-hour sessions showcasing technical achievements and policy advantages to use of satellite EO

In Haiti:

- RO post Matthew database transferred to CNIGS : a **concrete and perennial resource**
- Capacity of **Haitian organizations to respond themselves to future events** : a capacity that is developing, based on a long-term partnership with key organizations.
- Important **transfer of capacity**, notably on the development of operational land use products (annual LULC maps based on Sentinel-2 data).
- **Institutional relations strengthened** between space agencies and Haitian organizations, with on going training in 2021.
- Successful rapprochement with the **academic sector** (URGeo).

Outside Haiti:

- Work with UNDP/WB/UE on G-RO through **entire response/recovery/development loop**
- **Lessons learnt** used for RO Demonstrators
- Links UNDP / SCO Vietnam and other

Lessons Learned from Haiti RO Pilot 1/2

- Demonstrated the **value of satellite EO** to support post major disaster activities:
 - Satellites can be a very useful tool to **fill data gap** where **no other information are available** and to get **synoptic, regularly updated information** over large areas.
 - Satellite can provide information (together with other data set) in a wide **range of thematic products** relevant for **recovery** (short and long term)
- **First CEOS project focused on Recovery** phase with large participation and interest from space agencies, as well as from **international stakeholders**
- **Worthy model of collaboration** with **Haitian partners** that could be reproduced:
 - **Users** had **critical role** in the definition and in the management of the project
 - Methodologies based on **free and open data and software** to ensure sustainability
 - Consequent **capacity building** (and **academic conferences** program)
- Worthy model of collaboration with **international stakeholders** (PDNA tripartite agreement partners), that gave rise to Demonstrator proposal.

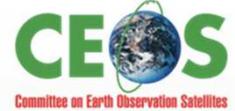

Lessons Learned from Haiti RO Pilot 2/2

- **Recovery satellite EO needs** are thoroughly different from those of other phases of disasters
- **Imaging & value adding** resources present **challenges** (e.g. scope vs resolution, cost-benefit of value adding)
- Specific approaches and adapted strategies are required to address them, **before** events occur
- A **coordinated** approach, **from Event to National Recovery Plan** (including Charter/Copernicus and PDNA) is required
- **Strong involvement of local users** (and providers when applicable) is necessary to success, however **international stakeholder community** is a critical corollary
- **Local capacity building** should be a standard component
- **Lessons learned** to date (in Haiti and elsewhere) offer **valuable** input but can be **challenging to scale up** : **Demonstrator will** showcase value achieved through investment

Mesi ampil ! Merci ! Thank you !
